

NCEP Contributions to the WMO Severe Weather Forecasting Demonstration Project (SWFDP) and to the African Monsoon Multidisciplinary Analysis (AMMA) Initiative

1.0. Rainfall Forecast: Valid 06Z of 25 February – 06Z of 2 March 2013. (Issued at 16:00Z of 25 February 2013)

1.1. Twenty Four Hour Cumulative Rainfall Forecasts

The forecasts are expressed in terms of 75% probability of precipitation (POP) exceeded, based on the NCEP, UK Met Office and the ECMWF NWP outputs, the NCEP global ensemble forecasts system (GEFS) and expert assessment.

Summary

In the next five days, In the next five days, moist lower-level winds from the Atlantic and Indian Oceans and their associated seasonal convergences are expected to maintain moderate to locally heavy rainfall over parts of Gabon, DRC, Angola, Zambia, Malawi, Mozambique, and South Africa.

1.2. Model Discussion: Valid from 00Z of 22 February 2013

Model comparison (Valid from 00Z; 25February 2013) shows all the three models are in general agreement in terms of depicting eastward movement of the Mascarene and St Helena high pressure systems during the forecast period. However, the models show slight differences in terms of central pressure values.

In the next five days the St. Helena High Pressure System over southeast Atlantic Ocean is expected to slightly strengthen through 24 to 72 hours. The central pressure value is expected to be about 1022hpa to 1026hpa according to GFS model, from about 1021hpa to 1025hpa according to ECMW and UKMET models).

The Mascarene high pressure system over southwestern Indian Ocean is also expected to strengthen throughout the forecasting period, while shifting smoothly eastwards. Its

central pressure value is expected to increase from about 1022hpa to 1031hpa, according to the GFS model, from about 1019hpa to 1030hpa according to ECMWF model and from about 1020hpa to 1031hpa according to UKMET model.

The seasonal lows across DRC, South Sudan and the neighboring areas is expected to remain slightly weak throughout the forecast period, with the central pressure values decreasing from about 1006hpa to 1004hpa according to the GFS, from about 1005hpa to 1003hpa according to the ECMWF and from about 1005hpa to 1004hpa according to the UKMET model. A low system over Mozambique Channel is expected to form through 48 to 72 hours with its central pressure value between 1005hpa to 1001hpa in total agreement with all the three models.

At the 850hpa level, the seasonal lower level wind convergence near the CAB region is expected to continue remain with weak to moderate convergence conditions through 24 to 120 hours. Weak to Moderate low level convergence is also expected to be experienced over central regions of DRC, Angola, northern parts of Zambia, Mozambique and Malawi.

At 500hpa, a trough in the mid-latitude westerly is expected dominate the flow over northern countries of Africa and Mediterranean Sea through 24 to 72 hours and an eastward propagation is expected to dominate the flow over the previously mentioned areas towards end of the forecast period. An eastward flow is expected to prevail over South Africa and the neighboring countries through most periods of the coming five days.

At 200hpa, the northern hemisphere sub-tropical westerly jet is expected to remain active through the forecast period; the core wind speed occasionally will exceed 130kts over northern African countries and Mediterranean Sea.

In the next five days, moist lower-level winds from the Atlantic and Indian Oceans and their associated seasonal convergences are expected to maintain moderate to locally heavy rainfall over parts of Gabon, DRC, Angola, Zambia, Malawi, Mozambique, and South Africa.

2.0. Previous and Current Day Weather Discussion over Africa

(24 February 2013 – 25 February 2013)

2.1. Weather assessment for the previous day (24 February 2013)

During the previous day, moderate to locally heavy rainfall was observed over Gabon, DRC, Congo and Angola.

2.2. Weather assessment for the current day (25 February 2013)

Intense clouds are observed over parts of DRC, Angola, northern Zambia, southern Tanzania and northern Mozambique.
