

Global Tropics Hazards And Benefits Outlook

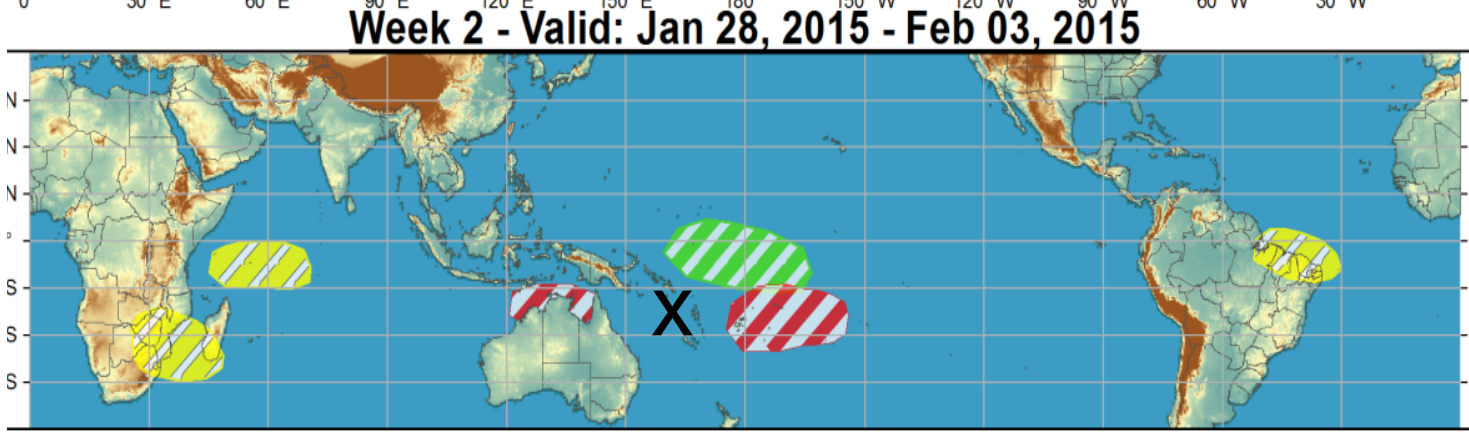

February 3, 2015

Matthew Rosencrans

Outline

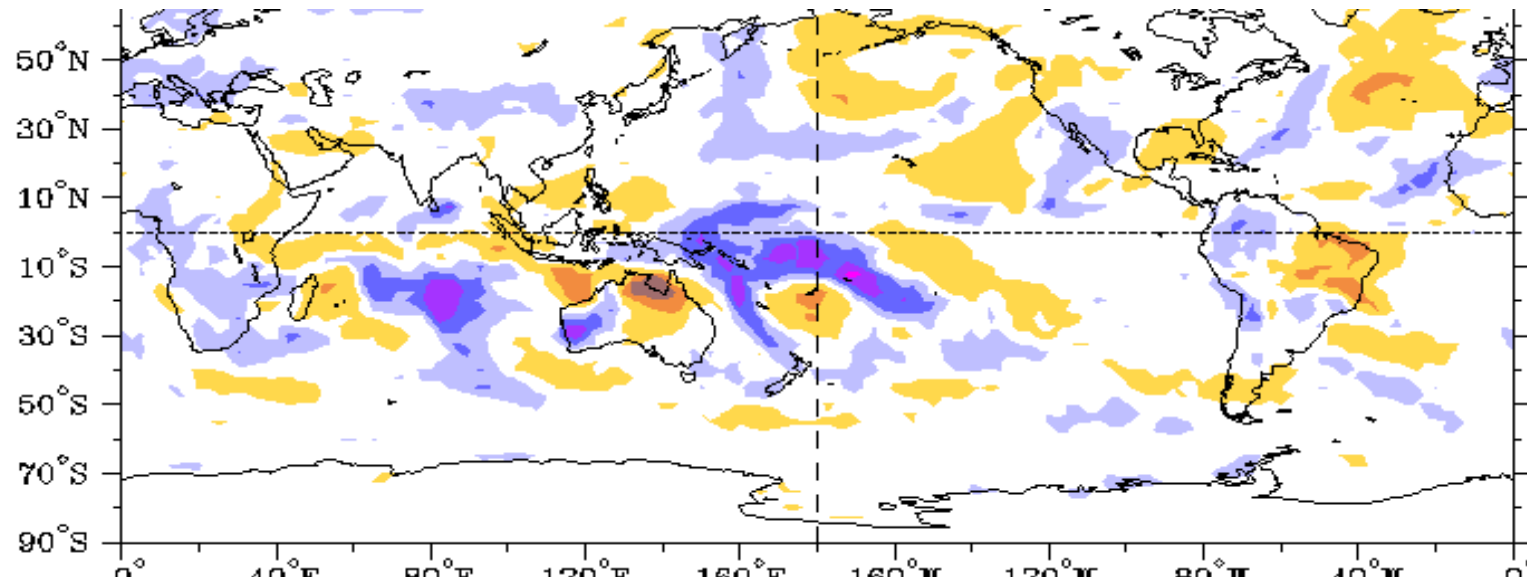

1. Review of Recent Conditions
2. Synopsis of Climate Modes
3. GTH Outlook and Forecast Discussion
4. Connections to U.S. Impacts

Outlook Review

Cool shading
More clouds/rain

Warm shading
Less clouds/rain

Synopsis of Climate Modes

ENSO:

- Current: ENSO-neutral (El Nino Watch)
- Outlook: There is an approximately 50-60% chance of El Niño conditions during the next two months, with ENSO-neutral favored thereafter..

MJO and other subseasonal tropical variability:

- The MJO was weak during the past week. Equatorial Rossby waves and the low-frequency background state are also contributing.
- Most dynamical model MJO index forecasts depict a strengthening of the signal over the Central Pacific during Week-1, with a westward shift during Week-2, which is not consistent with robust MJO activity.

Extratropics:

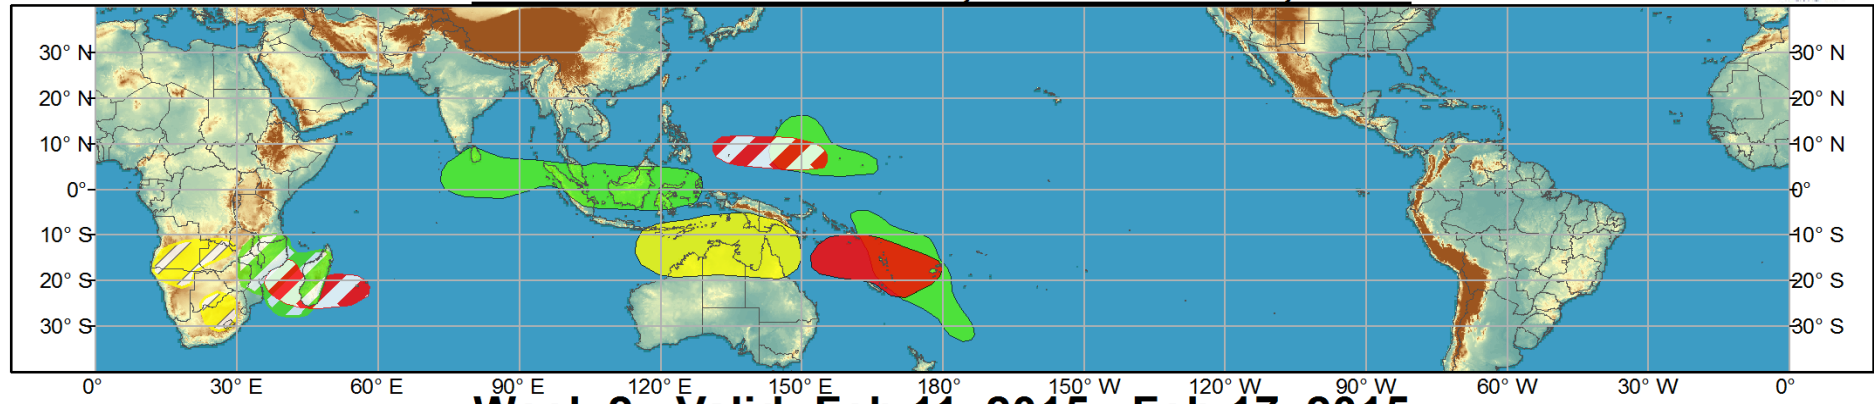

- The extended range forecast for the U.S. is not likely to be largely impacted directly by the MJO, but there is a chance for impact to the U.S. is likely later (days 15-20) as convection over the West Pacific interacts with the East Asian Jet. Internal, mid-latitude variability it likely to drive much of the pattern of the CONUS through day 14.

Global Tropics Hazards and Benefits Outlook - Climate Prediction Center

Week 1 - Valid: Feb 04, 2015 - Feb 10, 2015

Week 2 - Valid: Feb 11, 2015 - Feb 17, 2015

Confidence

High Moderate

- Tropical Cyclone Formation** Development of a tropical cyclone (tropical depression - TD, or greater strength).
- Above-average rainfall** Weekly total rainfall in the upper third of the historical range.
- Below-average rainfall** Weekly total rainfall in the lower third of the historical range.
- Above-normal temperatures** 7-day mean temperatures in the upper third of the historical range.
- Below-normal temperatures** 7-day mean temperatures in the lower third of the historical range.

Produced: 02/03/2015

Forecaster: Rosencrans

Product is updated once per week, except from 6/1 - 11/30 for the region from 120E to 0, 0 to 40N. The product targets broad scale conditions integrated over a 7-day period for US interests only. Consult your local responsible forecast agency.

IR Satellite & 200-hpa Velocity Potential Anomalies

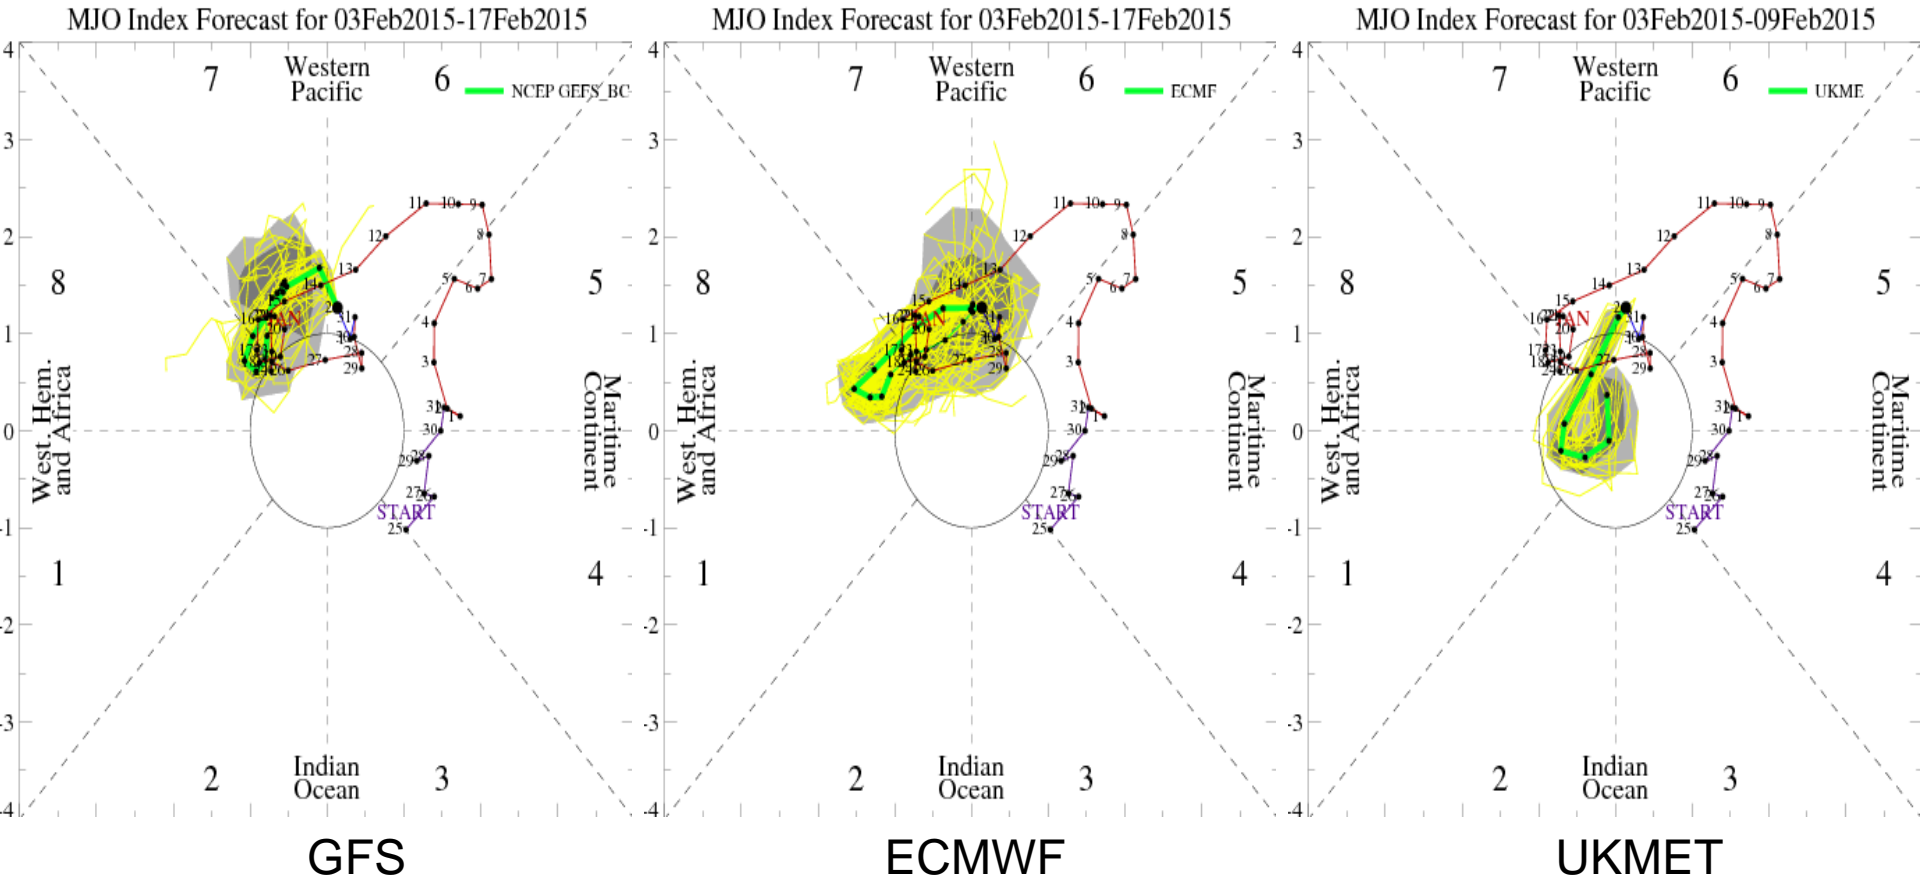

Green: Enhanced Divergence Brown: Enhanced Convergence

Base state
and transient
features
evident.

Inconsistent
with robust
MJO activity.

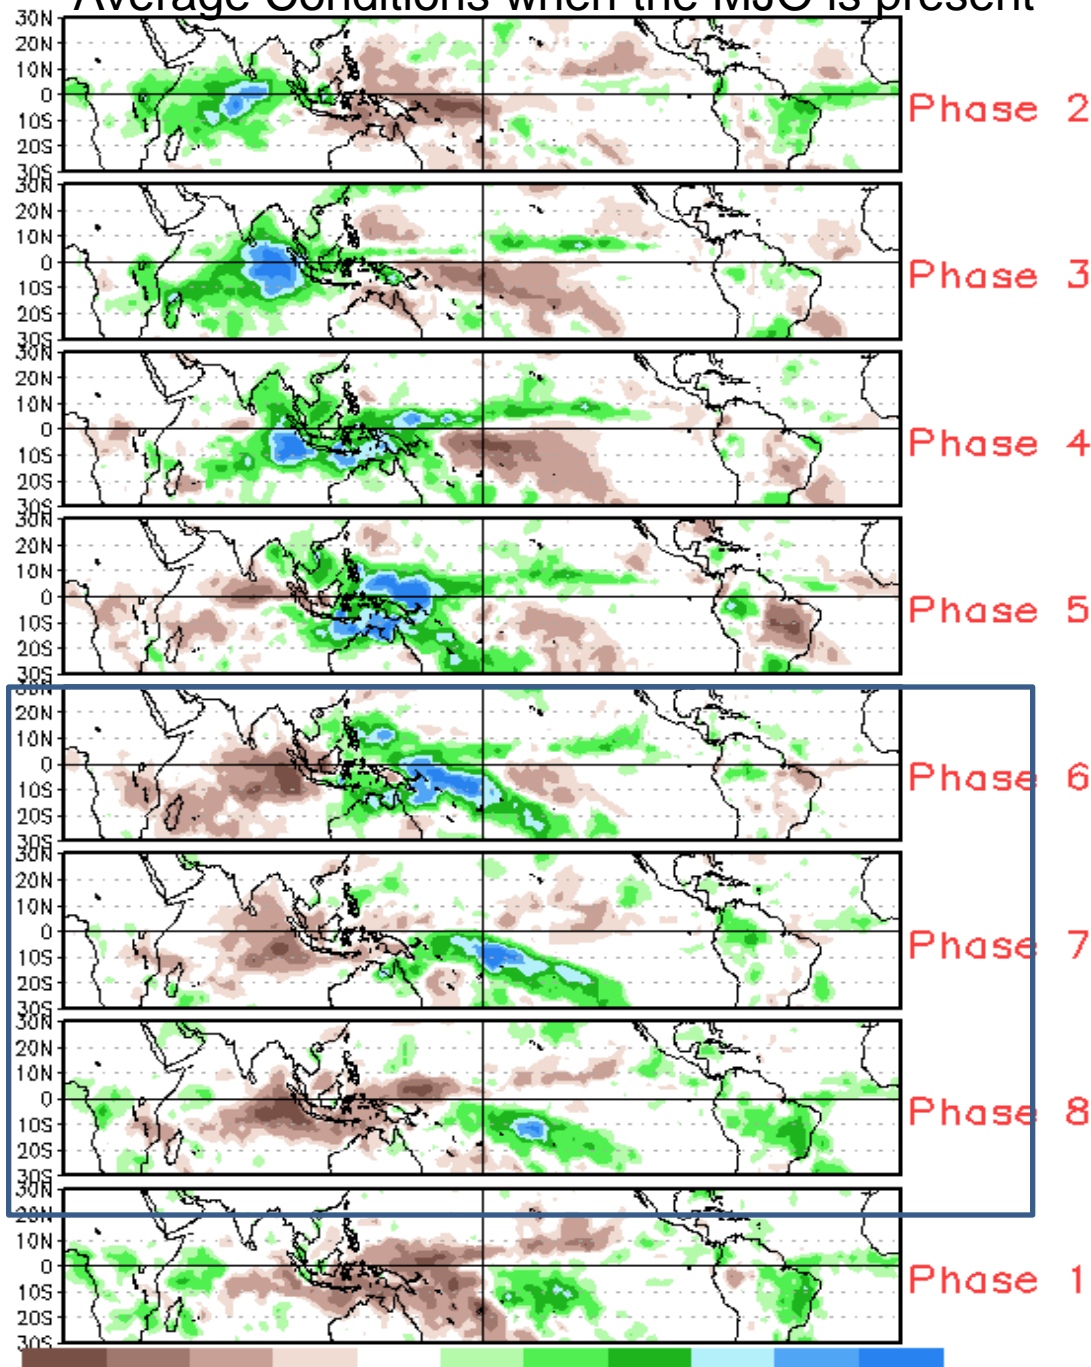

MJO Observation/Forecast

Wheeler-Hendon based analyses of model forecasts are inconsistent with robust MJO activity.

Models indicate convection aligns with 7/8 for the duration of 2 week..

Average Conditions when the MJO is present

CAVEAT: These panels are representative of robust MJO events.

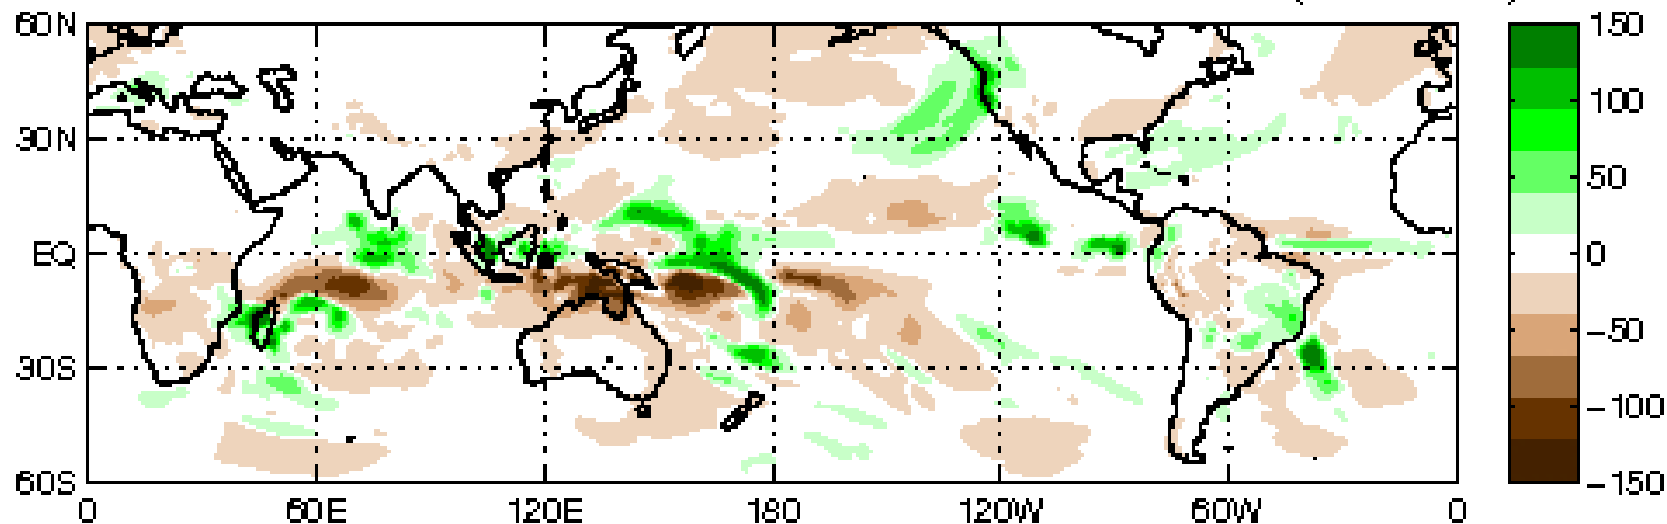

Low frequency is contributing, especially near 170E.

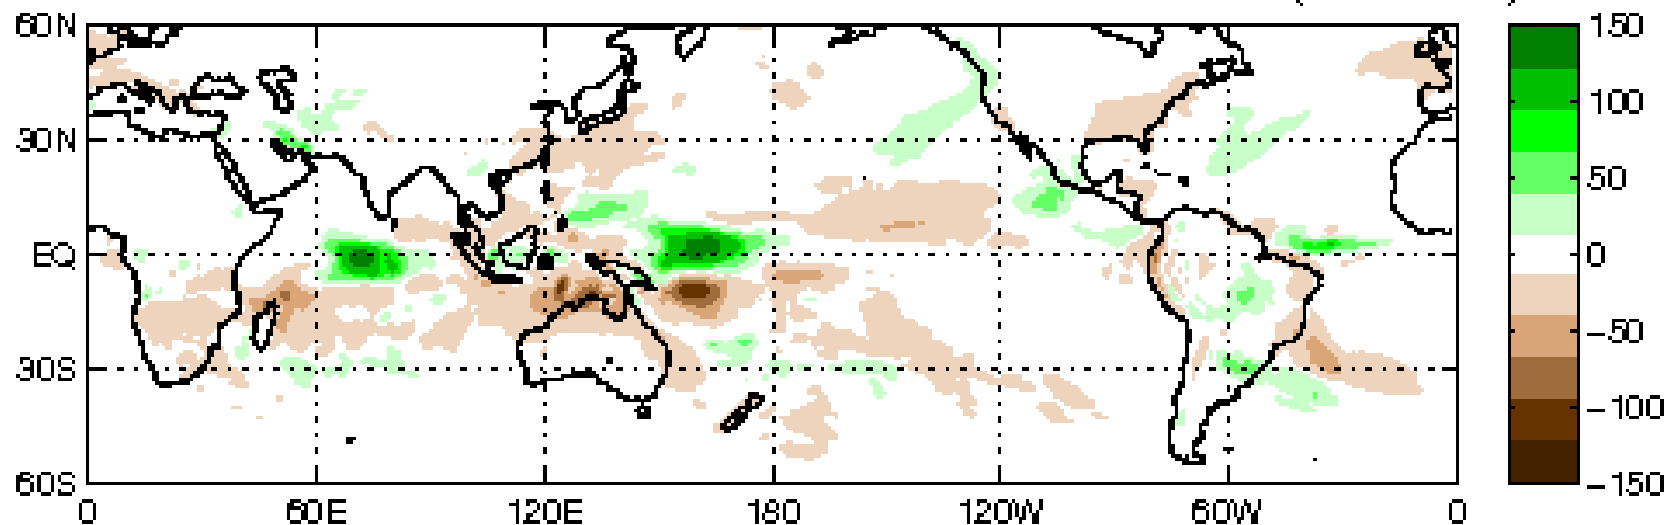

Equatorial Rossby Waves to impact the West Pacific and Maritime Continent.

Kelvin Wave to impact ePAC.

CFS: Anom. PREC Week: 1: 04-Feb-2015 to 10-Feb-2015 (mm/week)

CFS: Anom. PREC Week: 2: 11-Feb-2015 to 17-Feb-2015 (mm/week)

February Tropical Storm Formation by MJO phase

Phase 1 (41 days) 7 storms

Phase 4 (92 days) 21 storms

Phase 7 (125 days) 24 storms

Phase 2 (51 days) 7 storms

Phase 5 (70 days) 14 storms

Phase 8 (84 days) 13 storms

Phase 3 (89 days) 16 storms

Phase 6 (92 days) 19 storms

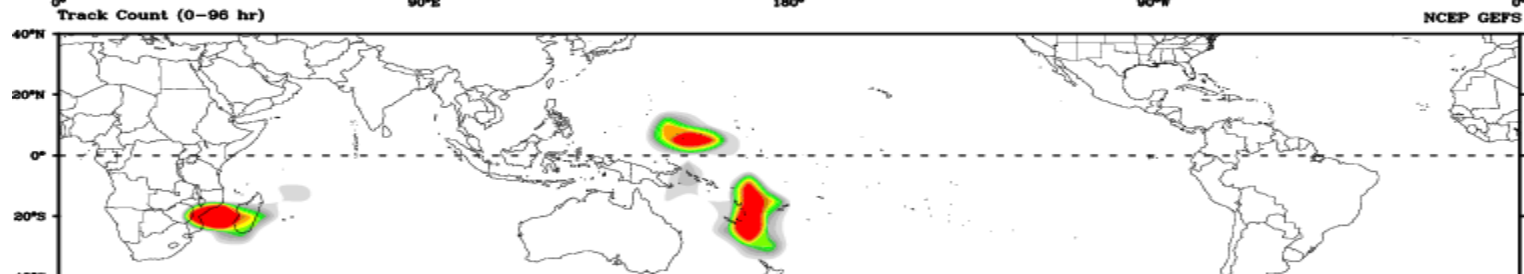

Null (308 days) 60 storms
