

Heat Hazards Outlooks for St. Lucia

Date of Issue: 2025-01-28

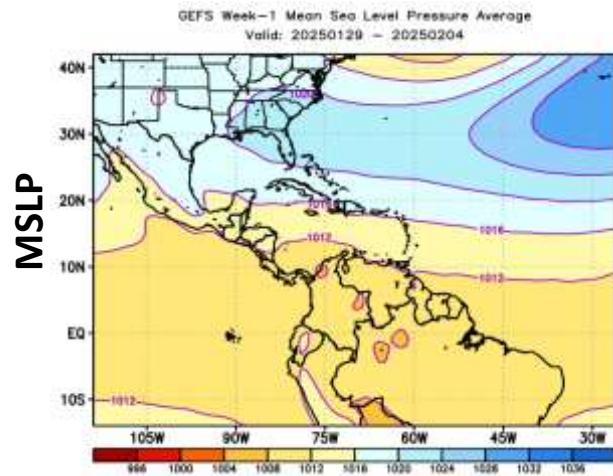

Week-1, Valid for: 29 January - 04 February 2025

Week-2, Valid for: 05 - 11 February 2025

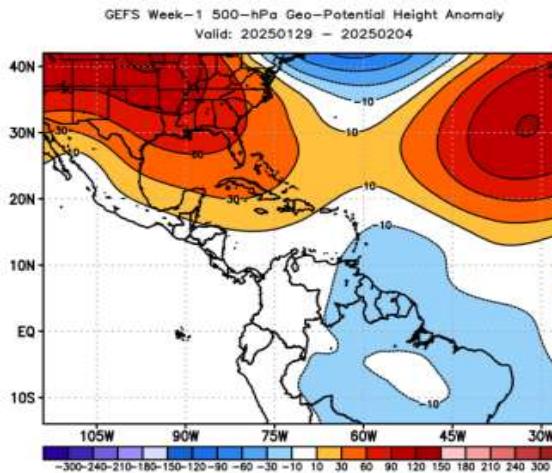

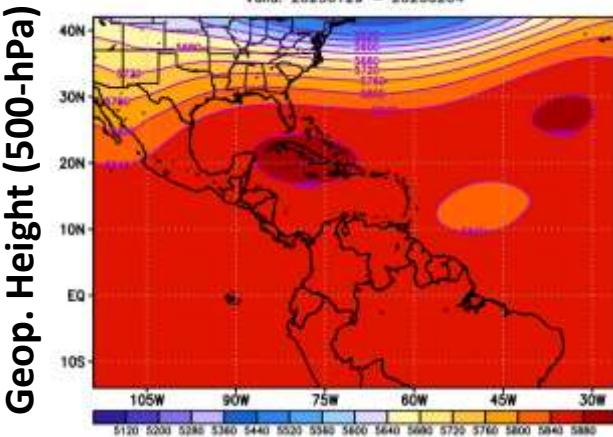

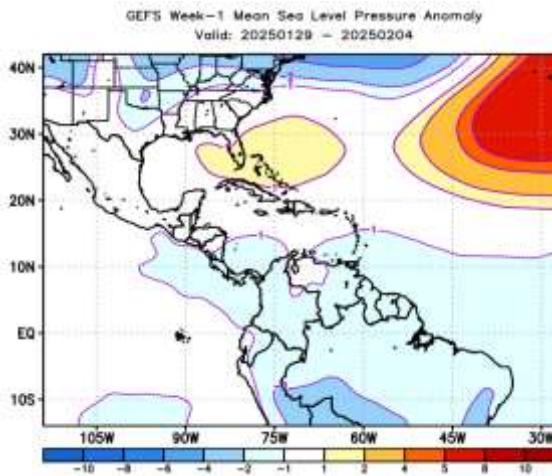

Week-1, Mean Sea Level Pressure & 500-hPa Height

7-day Total

7-day Anomaly

Next week, mean sea level pressure is forecasted to be slightly-above-average across northern Caribbean and to be slightly-below-average northern South America.

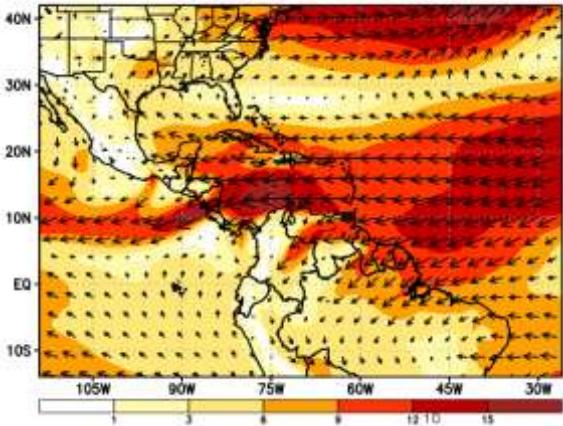

At 500-hPa, geopotential height anomalies forecasted to be slightly-above-average across northern Caribbean and to be slightly-below-average northern South America for next week.

Week-1, 925-hPa and 200-hPa Wind

Wind (925-hPa)

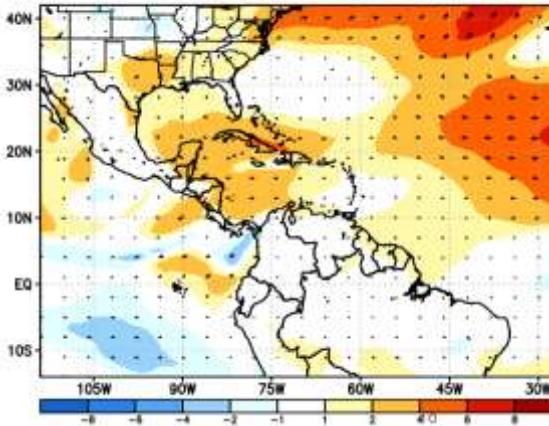

7-day Total

GEFS Week-1 925-hPa Wind Speed and Direction, Average
Valid: 20250129 – 20250204

7-day Anomaly

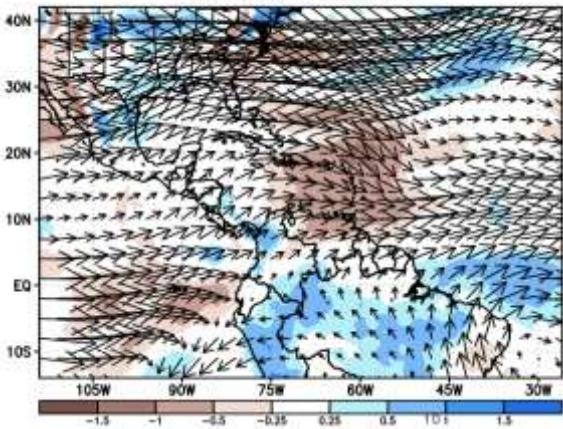

GEFS Week-1 925-hPa Wind Speed and Direction, Anomaly
Valid: 20250129 – 20250204

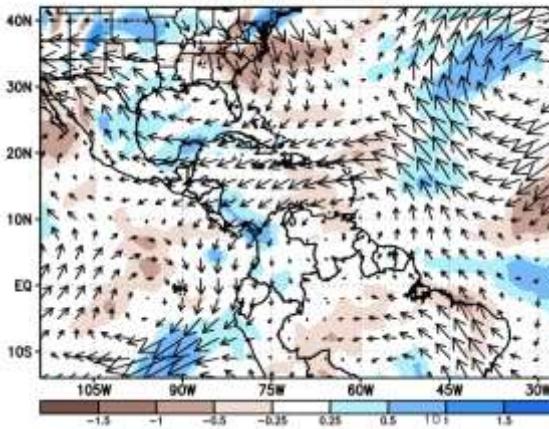

For week-1, low-level winds are easterly and expected to be stronger easterly over most of the region

Wind & Diverg. (200-hPa)

GEFS Week-1 200-hPa Divergence and Wind Average
Valid: 20250129 – 20250204

GEFS Week-1 200-hPa Divergence and Wind Anomaly
Valid: 20250129 – 20250204

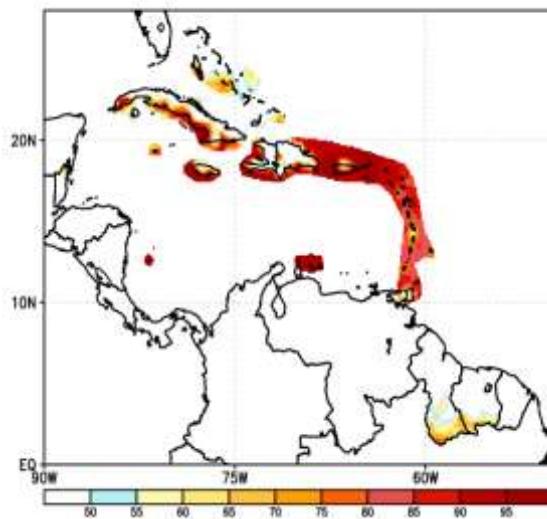

Upper-level convergence is expected over central Caribbean region.

Week-1, Daily Tmax/HI Hybrid Index Exceedance Probability, with Respect to Percentile Thresholds

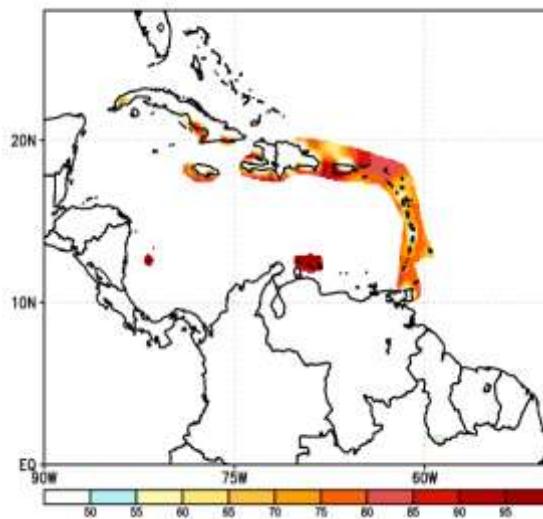

hybrid > 80th percentile,
≥3 consecutive days

GEFS Week-1 Tmax/HI hybrid exceedance Prob. > 80th, > 3 consec. days
Valid: 20250129 – 20250204

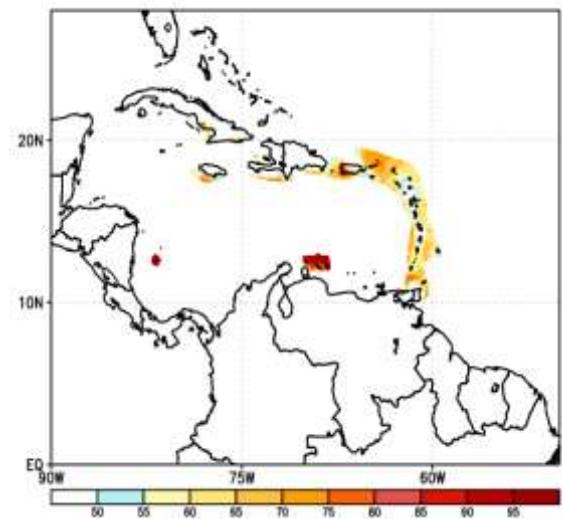

hybrid > 90th percentile,
≥3 consecutive days

GEFS Week-1 Tmax/HI hybrid exceedance Prob. > 90th, > 3 consec. days
Valid: 20250129 – 20250204

hybrid ≥ 95th percentile,
≥3 consecutive days

GEFS Week-1 Tmax/HI hybrid exceedance Prob. > 95th, > 3 consec. days
Valid: 20250129 – 20250204

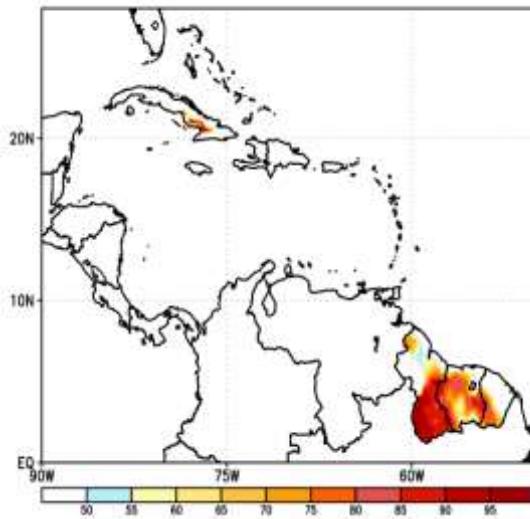

There is a high chance that the daily Tmax/HI_{max} hybrid index will exceed the 80th percentile for at least three consecutive days over southern Cuba, southern Jamaica, the Cayman Islands, Puerto Rico, the US Virgin Islands, the Lesser Antilles, Trinidad and Tobago, the ABC Islands, southern Guyana, and southern Suriname. There is also a moderate to high chance that the daily Tmax/HI_{max} hybrid index will exceed the 95th percentile for at least three consecutive days over the ABC Islands, eastern Puerto Rico, and the Lesser Antilles.

Week-1, Daily Tmax/HI Hybrid Index Exceedance Probability, with Respect to Fixed Thresholds

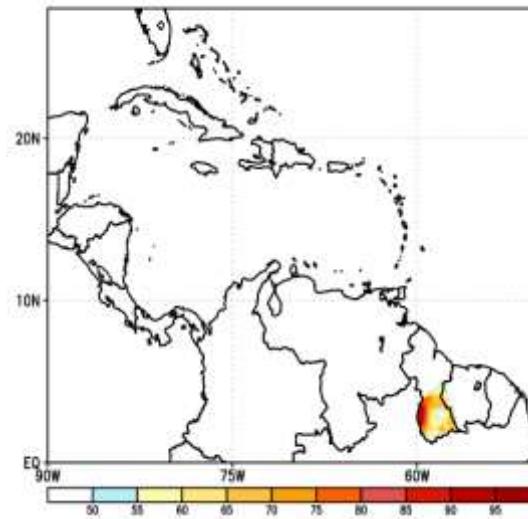

hybrid > 33°C,
≥3 consecutive days

FS Week-1 Tmax/HI hybrid exceedance Prob. > 33 deg. Cels., > 3 consec. da
Valid: 20250129 – 20250204

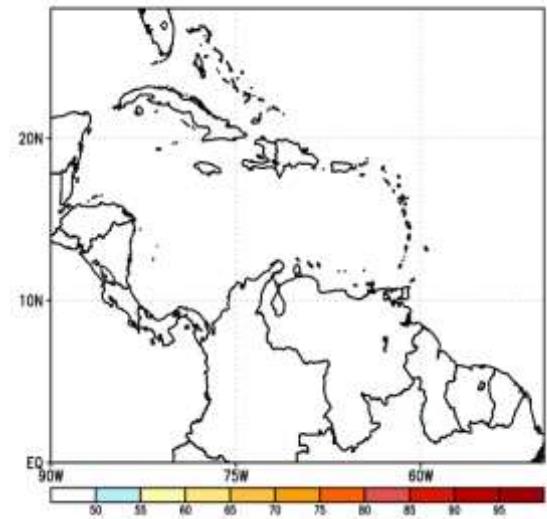

hybrid > 35°C,
≥3 consecutive days

FS Week-1 Tmax/HI hybrid exceedance Prob. > 35 deg. Cels., > 3 consec. da
Valid: 20250129 – 20250204

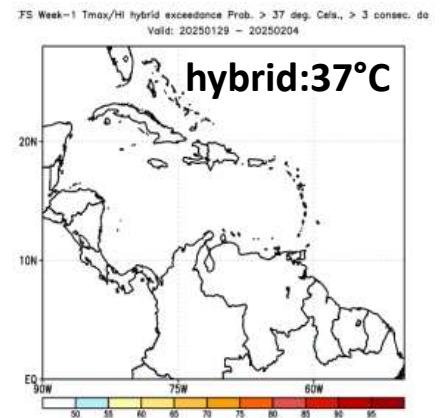

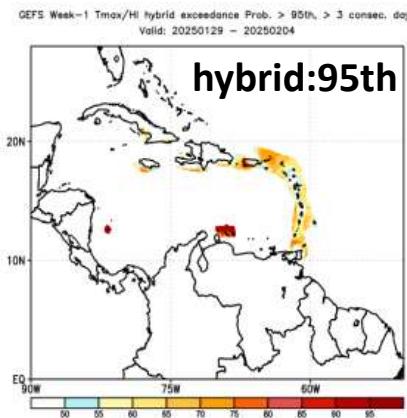

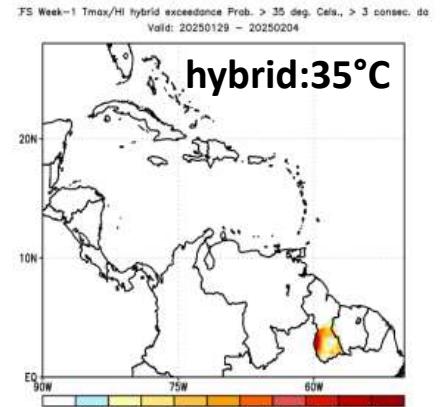

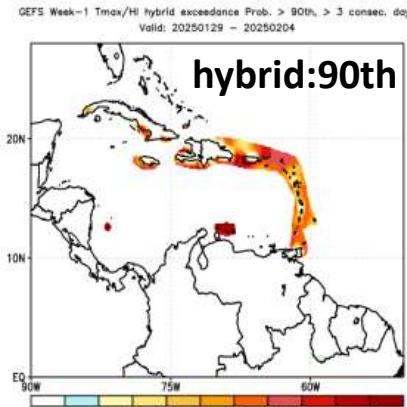

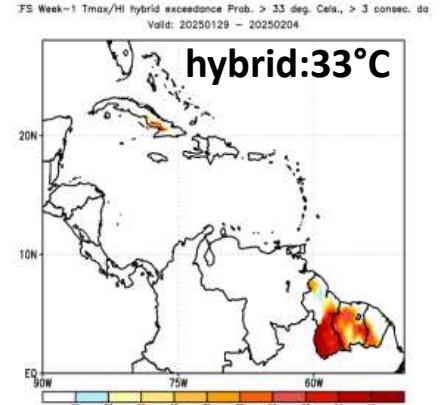

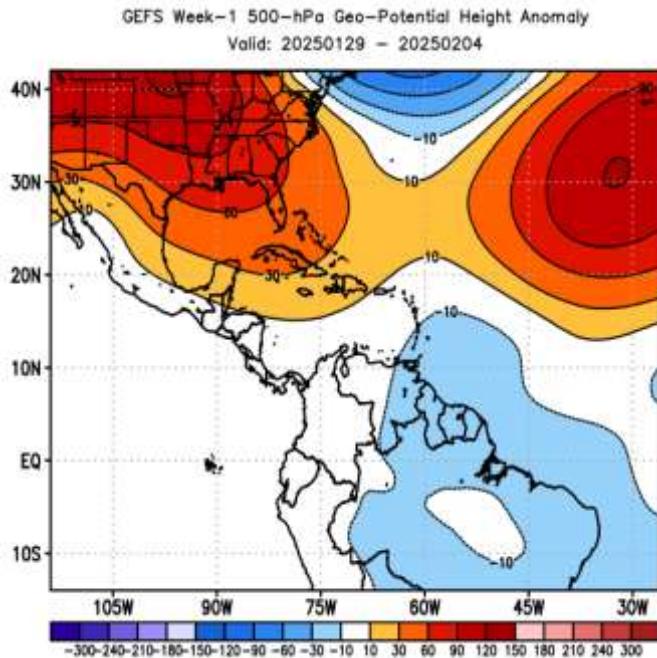

hybrid > 37°C,
≥3 consecutive days

FS Week-1 Tmax/HI hybrid exceedance Prob. > 37 deg. Cels., > 3 consec. da
Valid: 20250129 – 20250204

There is a high probability for daily Tmax/HImax hybrid index to exceed 33°C for at least 3 consecutive days over central and southern Guyana, central Suriname and southeastern French Guinea. There is also a moderate to high chance for daily Tmax/HImax hybrid index to exceed 35°C over southern Guyana.

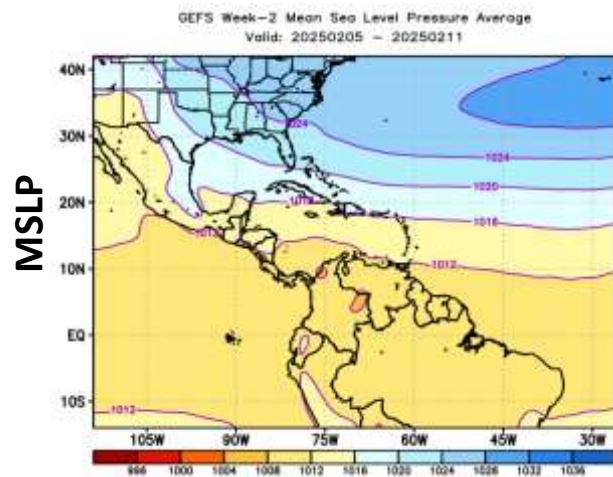

Week-1, Convergence of Evidences

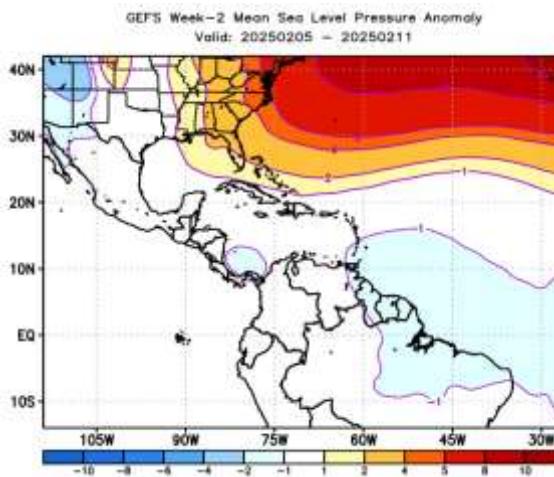

- At 500 hPa, model forecasts indicate that geopotential height anomalies will be slightly above average across the northern Caribbean and slightly below average over northern South America for the next week.
- Hybrid index exceedance probability forecasts indicate: High chances for the hybrid index to exceed the 80th percentile and for the hybrid index to exceed 33°C over southern Guyana and southern Suriname.
- Therefore, a heat hazard warning for excessive heat will be issued for these regions.

Week-2, Mean Sea Level Pressure & 500-hPa Height

7-day Total

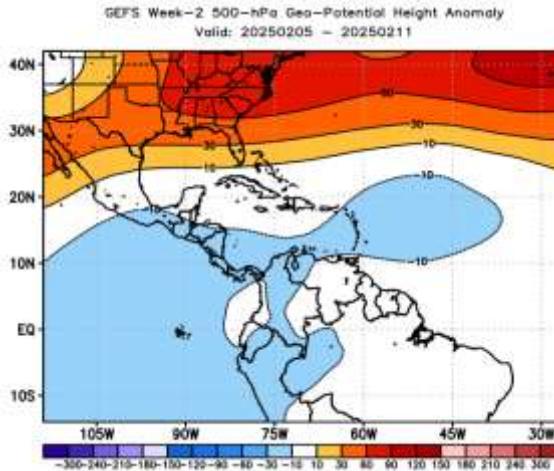

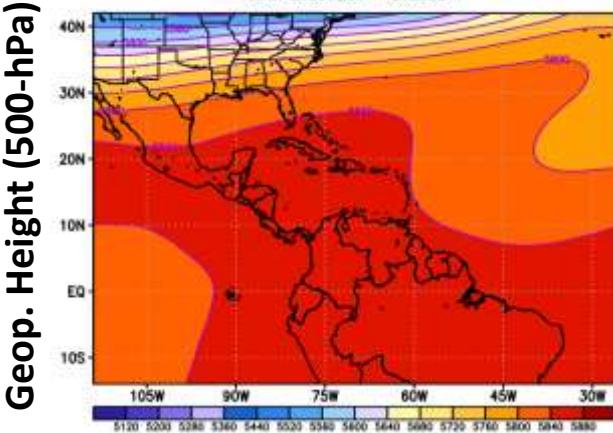

7-day Anomaly

For week-2, mean sea level pressure is forecasted to be slightly-above-average over Bahamas and slightly-below-average across northern South America.

Geop. Height (500-hPa)

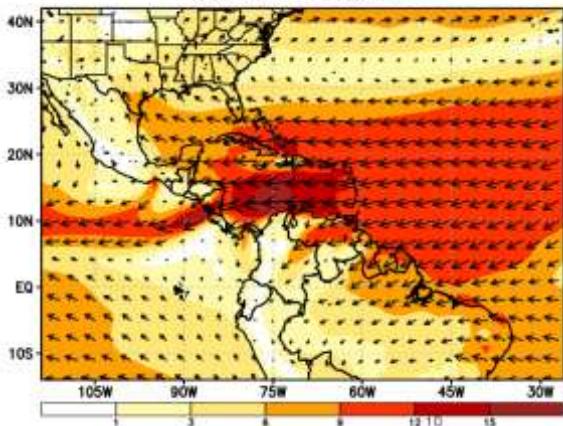

At 500-hPa, geopotential height anomalies to be slightly-above-average over Bahamas and slightly-below-average across northern South America for next week.

Week-2, 925-hPa and 200-hPa Wind

Wind (925-hPa)

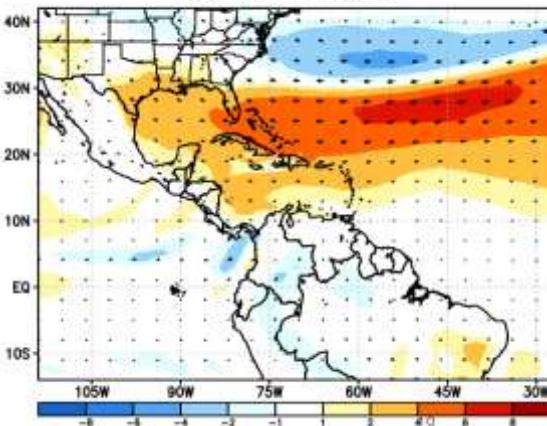

7-day Total

GEFS Week-2 925-hPa Wind Speed and Direction, Average
Valid: 20250205 – 20250211

7-day Anomaly

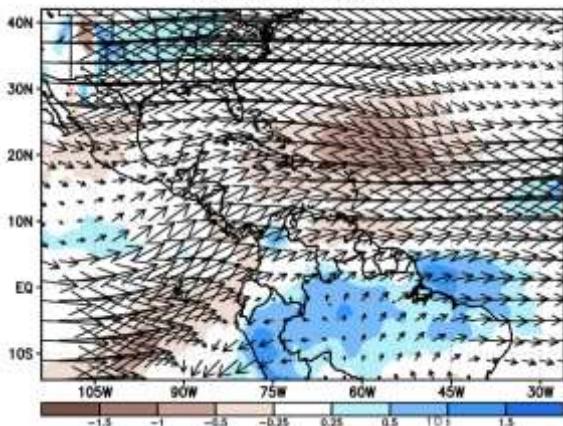

GEFS Week-2 925-hPa Wind Speed and Direction, Anomaly
Valid: 20250205 – 20250211

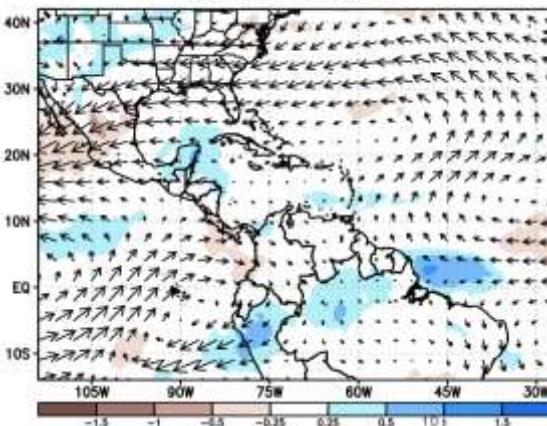

For week-2, low-level winds are expected to be easterly and above-average over central Caribbean region and easterly and near average over northern South America

Wind & Diverg. (200-hPa)

GEFS Week-2 200-hPa Divergence and Wind Average
Valid: 20250205 – 20250211

GEFS Week-2 200-hPa Divergence and Wind Anomaly
Valid: 20250205 – 20250211

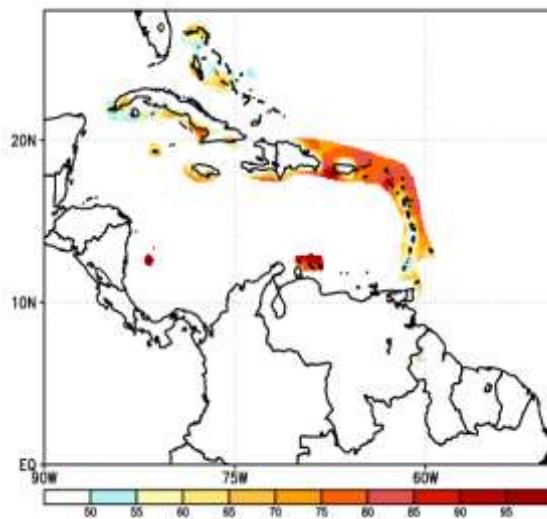

Upper-level convergence is expected over much of the central Caribbean region.

Week-2, Daily Tmax/HI Hybrid Index Exceedance Probability, with Respect to Percentile Thresholds

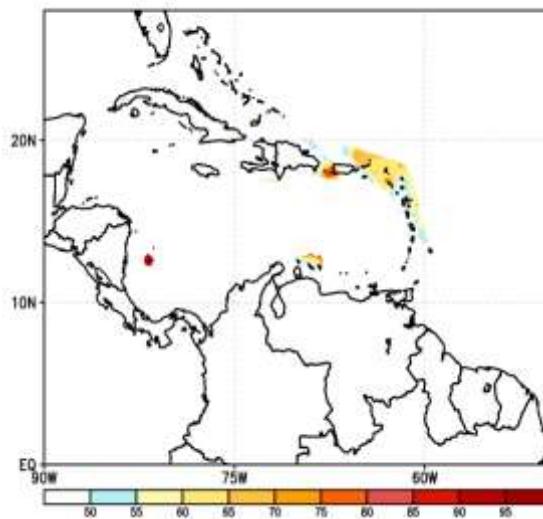

hybrid > 80th percentile,
≥3 consecutive days

GEFS Week-2, Tmax/HI hybrid exceedance Prob. > 80th, > 3 consec. days
Valid: 20250205 – 20250211

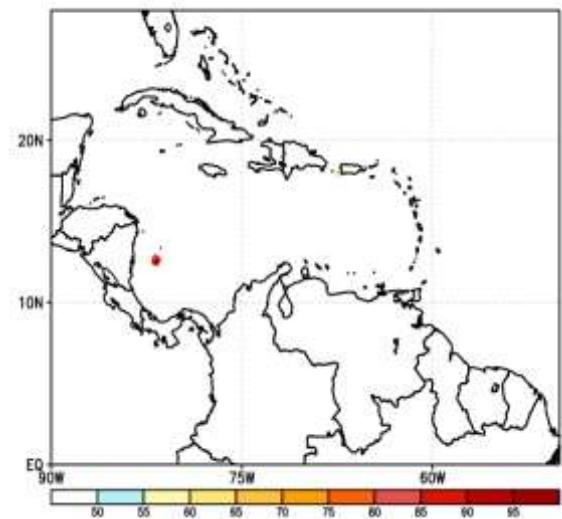

hybrid > 90th percentile,
≥3 consecutive days

GEFS Week-2, Tmax/HI hybrid exceedance Prob. > 90th, > 3 consec. days
Valid: 20250205 – 20250211

hybrid ≥ 95th percentile,
≥3 consecutive days

GEFS Week-2, Tmax/HI hybrid exceedance Prob. > 95th, > 3 consec. days
Valid: 20250205 – 20250211

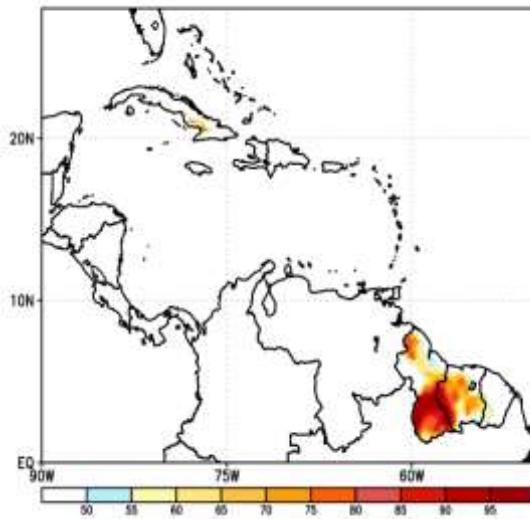

There is a high chance for daily Tmax/HI_{max} hybrid index to exceed the 80th percentile for at least 3 consecutive days over Puerto Rico, Us Virgin Islands, ABC Island and Lesser Antilles. There is also a moderate to high chance for daily Tmax/HI_{max} hybrid index to exceed the 90th percentile for at least 3 consecutive days over northern Lesser Antilles.

Week-2, Daily Tmax/HI Hybrid Index Exceedance Probability, with Respect to Fixed Thresholds

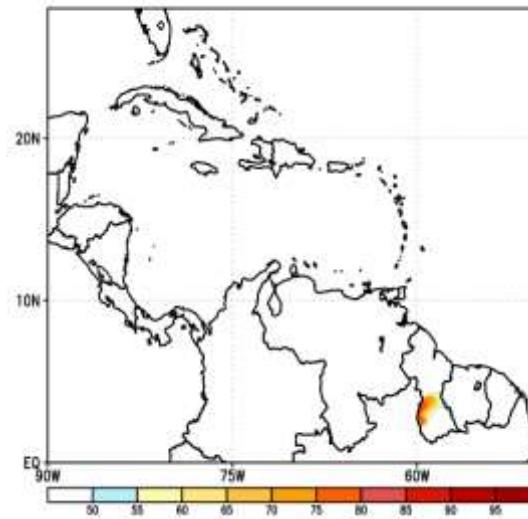

hybrid > 33°C,
≥3 consecutive days

FS Week-2 Tmax/HI hybrid exceedance Prob. > 33 deg. Cels., > 3 consec. do
Valid: 20250205 – 20250211

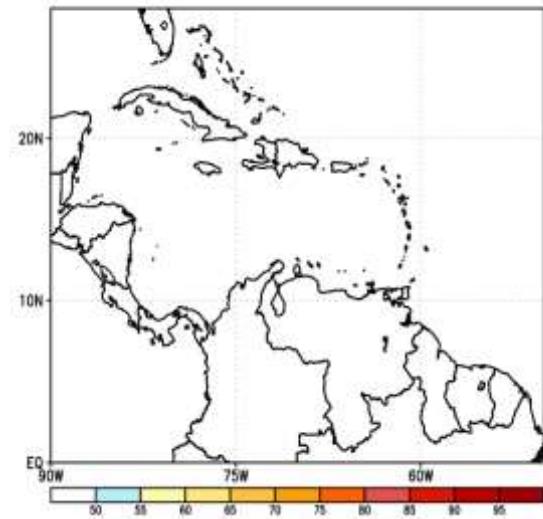

hybrid > 35°C,
≥3 consecutive days

FS Week-2 Tmax/HI hybrid exceedance Prob. > 35 deg. Cels., > 3 consec. do
Valid: 20250205 – 20250211

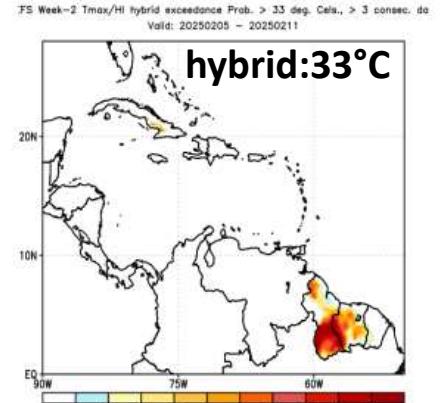

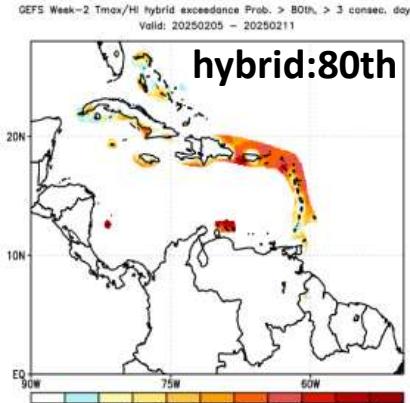

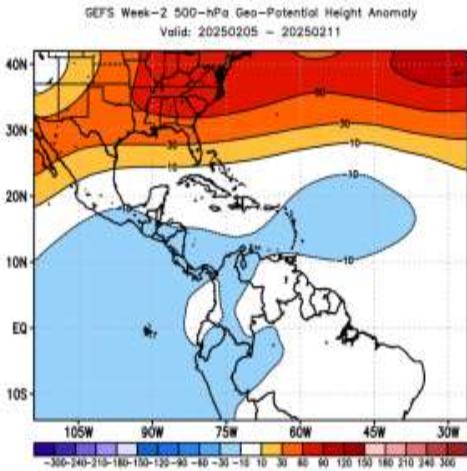

hybrid > 37°C,
≥3 consecutive days

FS Week-2 Tmax/HI hybrid exceedance Prob. > 37 deg. Cels., > 3 consec. do
Valid: 20250205 – 20250211

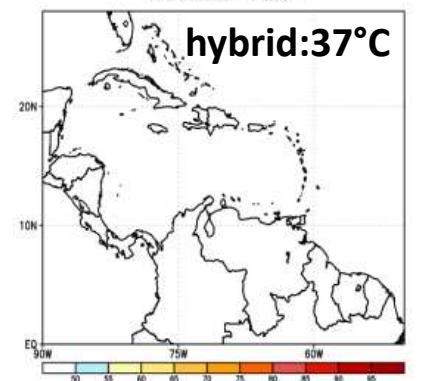

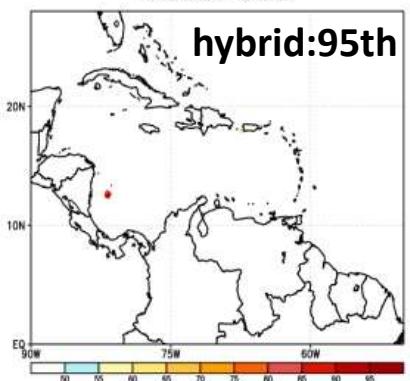

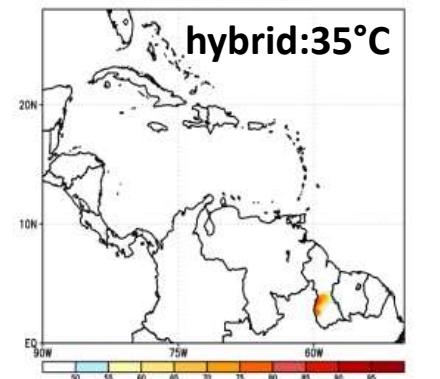

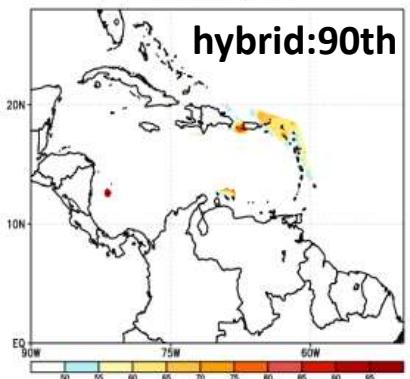

There is a high probability that the daily Tmax/HImax hybrid index will exceed 33°C for at least three consecutive days over northern and southern Guyana and central Suriname. There is also a moderate to high chance that the daily Tmax/HImax hybrid index will exceed 35°C over central-western Guyana.

Week-2, Convergence of Evidences

- At 500 hPa, model forecasts indicate slightly above average conditions over the Bahamas and slightly below average conditions across northern South America.
- Hybrid index exceedance probability forecasts indicate:
 - High chances for the hybrid index to exceed the 80th percentile over Puerto Rico, the US Virgin Islands, the ABC Islands, and the Lesser Antilles, but temperatures remain below 33°C in these regions.
 - High chances for the hybrid index to exceed 33°C over northern and southern Guyana and central Suriname, and to exceed 35°C over central-western Guyana, but it remains below the 80th percentile. Based on absolute temperature thresholds, excessive and severe heat warnings are issued for northern and southern Guyana and central Suriname.

Week-1 Heat Hazards Outlook

Week-1 Caribbean Heat Hazard Outlooks Valid: 29 Jan-04 Feb 2025

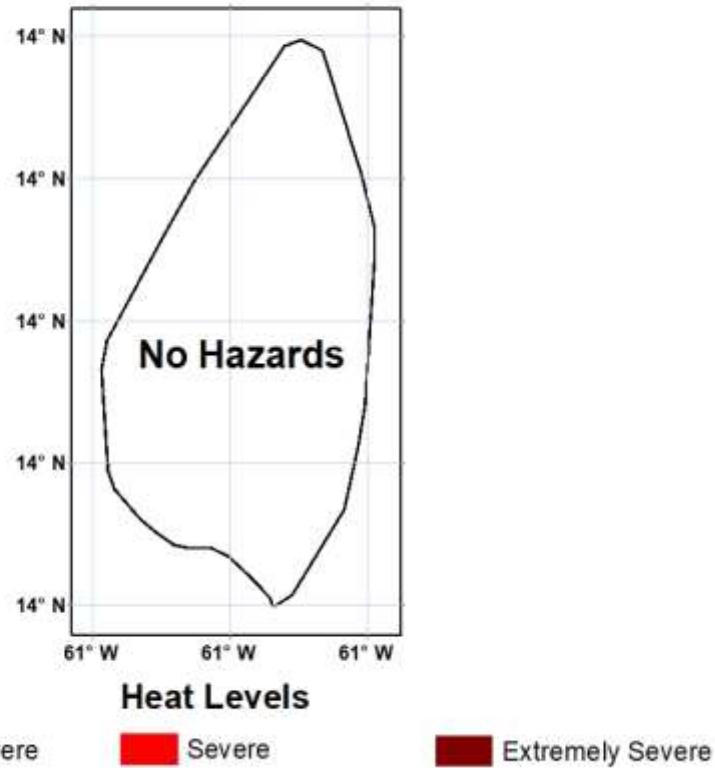

There is an increased chance for moderately severe heat over Guyana, southern Suriname and French Guiana. An increased chance for severe heat exists over central Guyana

Hybrid index probability of exceedance forecasts also suggest high chances for persistent heat in the orange and red shaded areas.

Week-1 Heat Hazards Outlook for St. Lucia

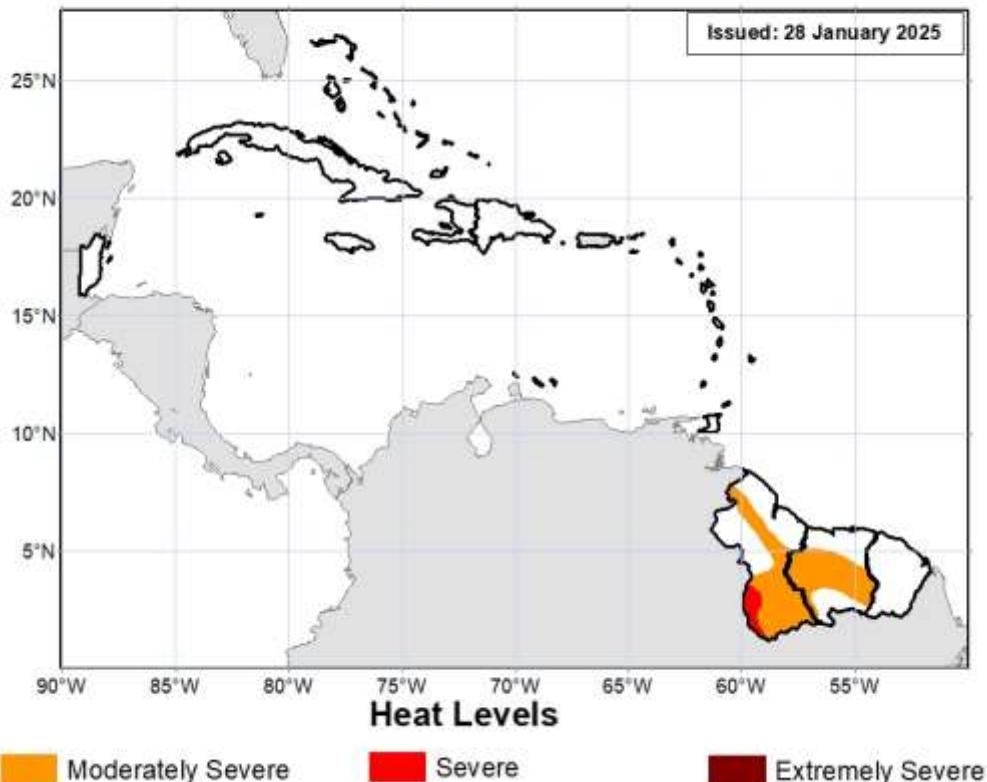

Week-1 St. Lucia Heat Hazard Outlooks
Valid: 29 Jan - 04 Feb 2025

There is no heat hazard expected over St. Lucia during this week

Week-2 Heat Hazards Outlook

Week-2 Caribbean Heat Hazard Outlooks Valid: 5 - 11 Feb 2025

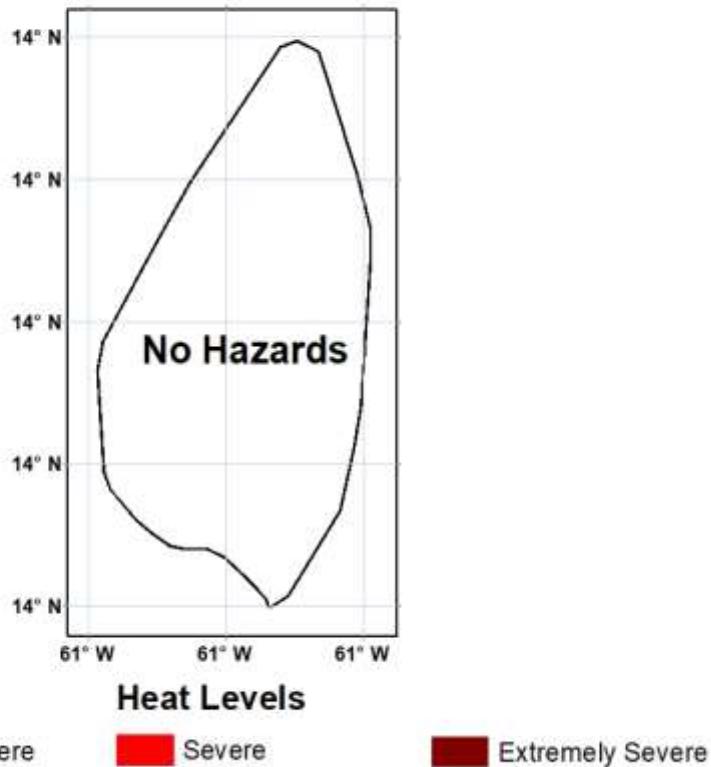

There is an increased chance for moderately severe heat over northern and southern Guyana and in central Suriname. An increased chance for severe heat exists over southwestern Guyana

Hybrid index probability of exceedance forecasts also suggest high chances for persistent heat in the orange and red shaded areas.

Week-2 Heat Hazards Outlook for St. Lucia

Week-2 St. Lucia Heat Hazard Outlooks Valid: 5 - 11 Feb 2025

No heat hazard is expected over the St. Lucia during week 2 of the forecast.
