

Global Tropics Hazards And Benefits Outlook

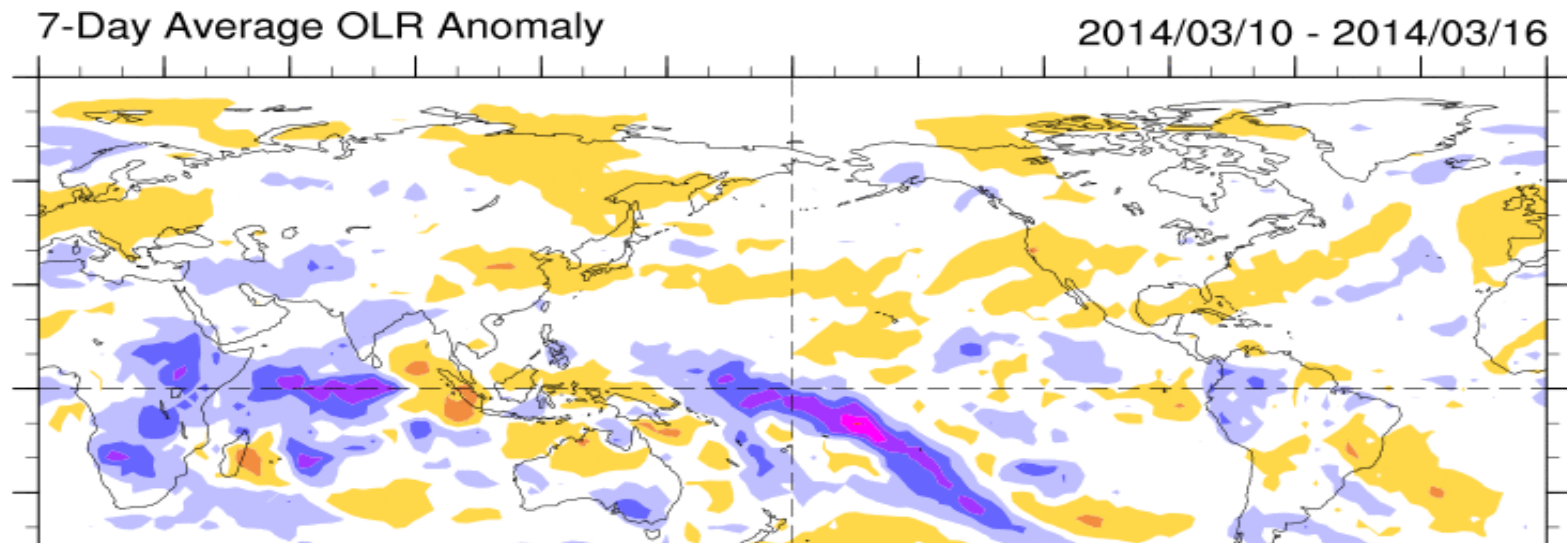

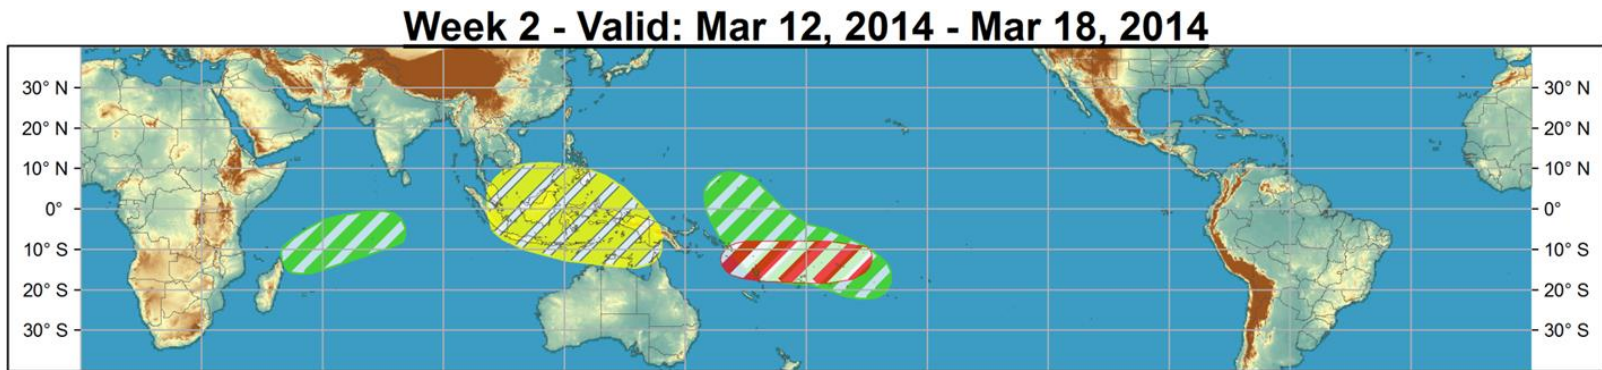

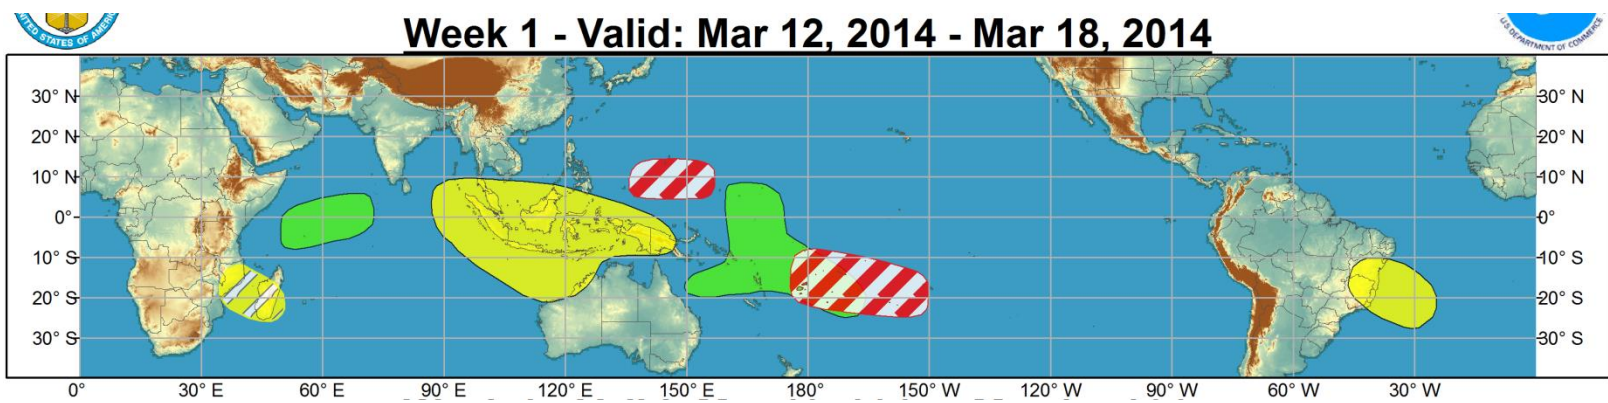

March 18, 2014

Adam Allgood

Outline

1. Review of Recent Conditions
2. Synopsis of Climate Modes
3. GTH Outlook and Forecast Discussion
4. Connections to U.S. Impacts

Outlook Review

Synopsis of Climate Modes

ENSO:

- ENSO-neutral is expected to continue through the Northern Hemisphere spring 2014, with about a 50% chance of El Niño developing during the summer or fall.
- ENSO Alert System Status: El Niño Watch

MJO and other subseasonal tropical variability:

- The MJO remained active over the past week, although observational indicators became less coherent due to destructive interference with other modes of organized tropical convection anomalies. The MJO enhanced phase is emerging over the western Indian Ocean.
- There is considerable spread among dynamical forecast model depictions of the future evolution of the MJO, with some weakening the signal and others propagating a signal through the Indian Ocean.
- There is also a variety of model solutions for resolving the interactions between the slowly evolving oceanic and atmospheric conditions over the west-central Pacific with the suppressed phase of the MJO.

Extratropics:

- Based on the complexity of the current global tropical pattern, significant extratropical impacts are uncertain.

Global Tropics Hazards and Benefits Outlook - Climate Prediction Center

Week 1 - Valid: Mar 19, 2014 - Mar 25, 2014

Week 2 - Valid: Mar 26, 2014 - Apr 01, 2014

Confidence
High Moderate

Tropical Cyclone Formation

Development of a tropical cyclone that eventually reaches tropical storm/cyclone strength.

Above-average rainfall

Weekly total rainfall in the upper third of the historical range.

Below-average rainfall

Weekly total rainfall in the lower third of the historical range.

Above-normal temperatures

7-day mean temperatures in the upper third of the historical range.

Below-normal temperatures

7-day mean temperatures in the lower third of the historical range.

Produced: 03/18/2014

Forecaster: Allgood

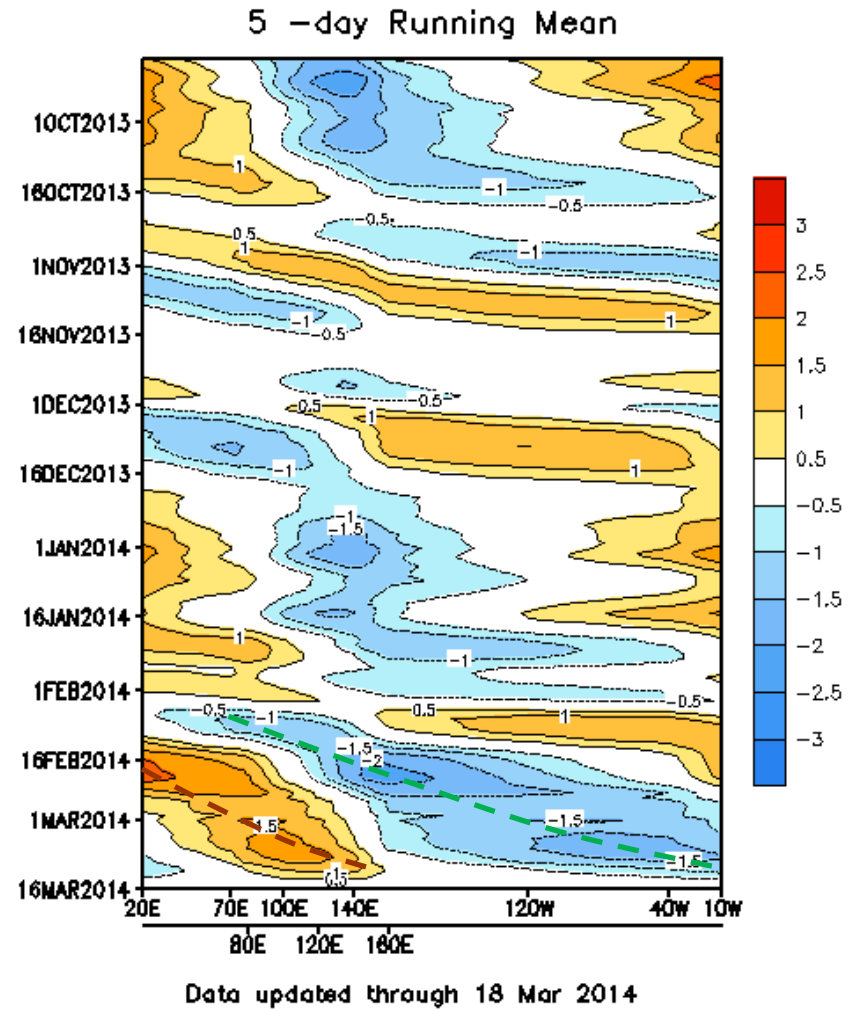

Product is updated once per week. The product targets broad scale conditions integrated over a 7-day period for US interests only. Consult your local responsible forecast agency.

MJO Observation/Forecast

Average Conditions when the MJO is present (Nov - Mar)

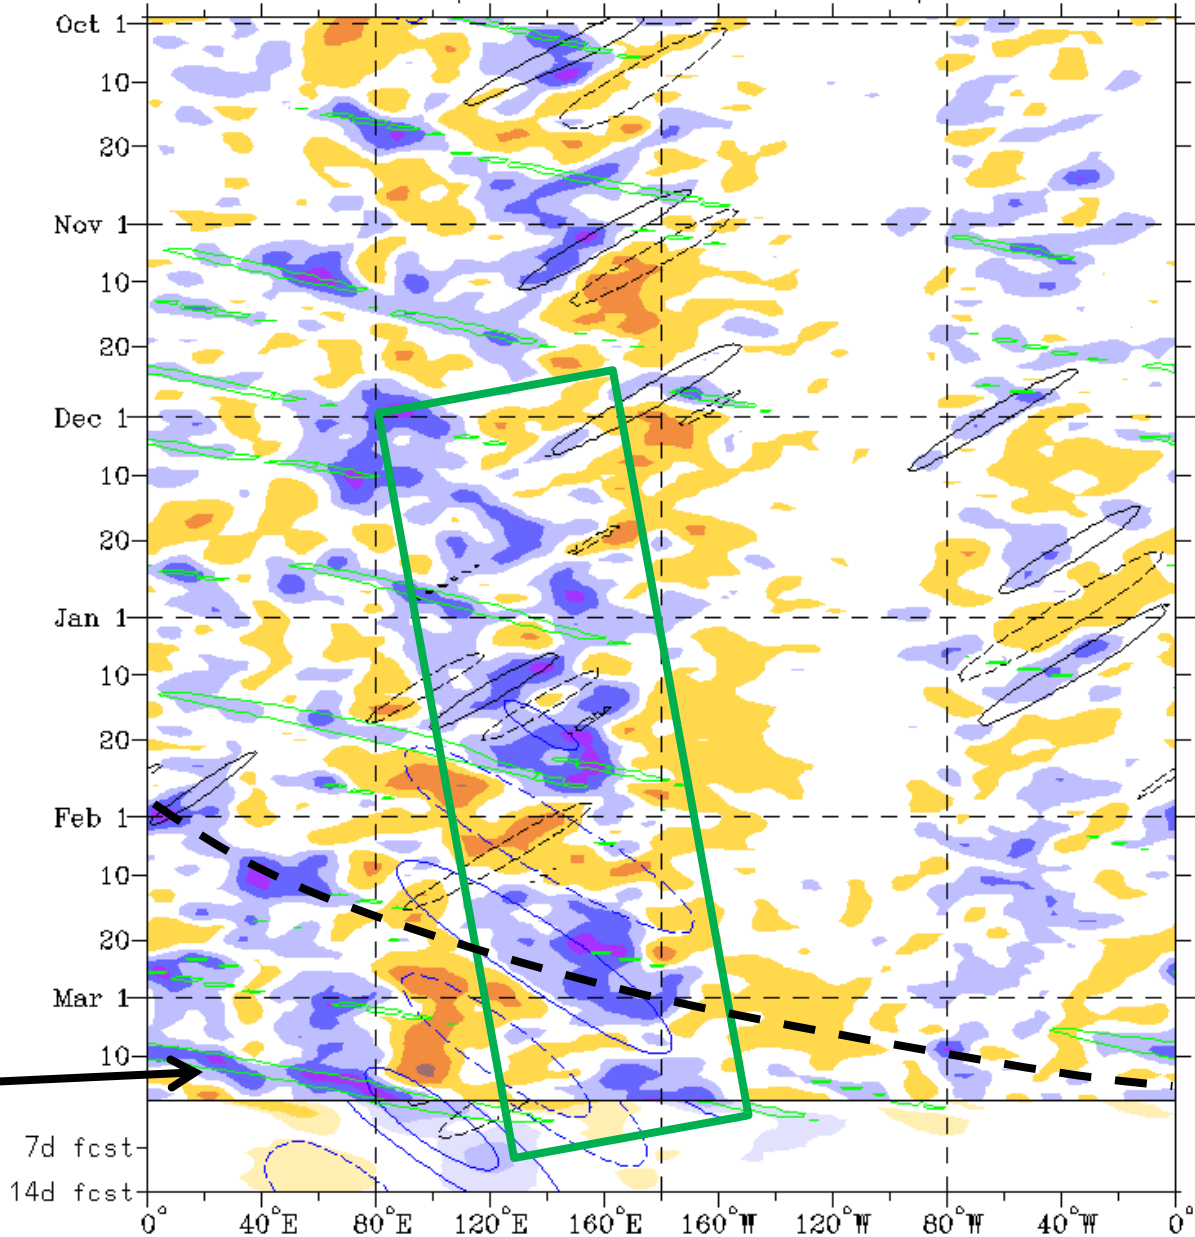

Comparison of
MJO composites
with recent
conditions

A slowly evolving low-frequency state favoring enhanced convection and associated with above normal SSTs has shifted slowly eastward to the west-central Pacific during the past several months (green box).

Higher frequency modes have modulated the base state convection.
