Synopsis of Climate Modes

ENSO:

- La Nina Watch in effect as of 12 May 2016

La Nina favored to develop during NH Summer; ~75% chance of La Nina during the Fall and Winter 2016/17.

MJO and other subseasonal tropical variability:

- MJO in phase 7/8 (Western Hemisphere) last week. Residual convection over eastern Indian Ocean/western Pacific interfering with Wave-1 structure.
- Most dynamical model MJO index forecasts depict the MJO signal to remain weak over the coming week, but an increase in amplitude is generally expected over the Indian Ocean (GEFS) during Week-2. ECMWF/Canadian propagate signal even farther east to Maritime Continent. Significant uncertainty remains.

Extratropics:

- The extended range temperature and precipitation forecasts for the U.S. may be affected by potential tropical development in the Caribbean/Gulf of Mexico/Florida/Bahamas region.

Week 1 - Valid: Jun 08, 2016 - Jun 14, 2016

Week 2 - Valid: Jun 15, 2016 - Jun 21, 2016

Confidence
 High Moderate

- Tropical Cyclone Formation** Development of a tropical cyclone (tropical depression - TD, or greater strength).
- Above-average rainfall** Weekly total rainfall in the upper third of the historical range.
- Below-average rainfall** Weekly total rainfall in the lower third of the historical range.
- Above-normal temperatures** 7-day mean temperatures in the upper third of the historical range.
- Below-normal temperatures** 7-day mean temperatures in the lower third of the historical range.

Product is updated once per week, except from 6/1 - 11/30 for the region from 120E to 0, 0 to 40N. The product targets broad scale conditions integrated over a 7-day period for US interests only. Consult your local responsible forecast agency.

IR Satellite & 200-hPa Velocity Potential Anomalies

Green: Enhanced Divergence Brown: Enhanced Convergence

Wave-2 pattern with 200-hPa divergence over Asia, Australia, & central/eastern Pacific.

23 MAY 2016

200-hPa divergence over the eastern Pacific/Americas & eastern IO

30 MAY 2016

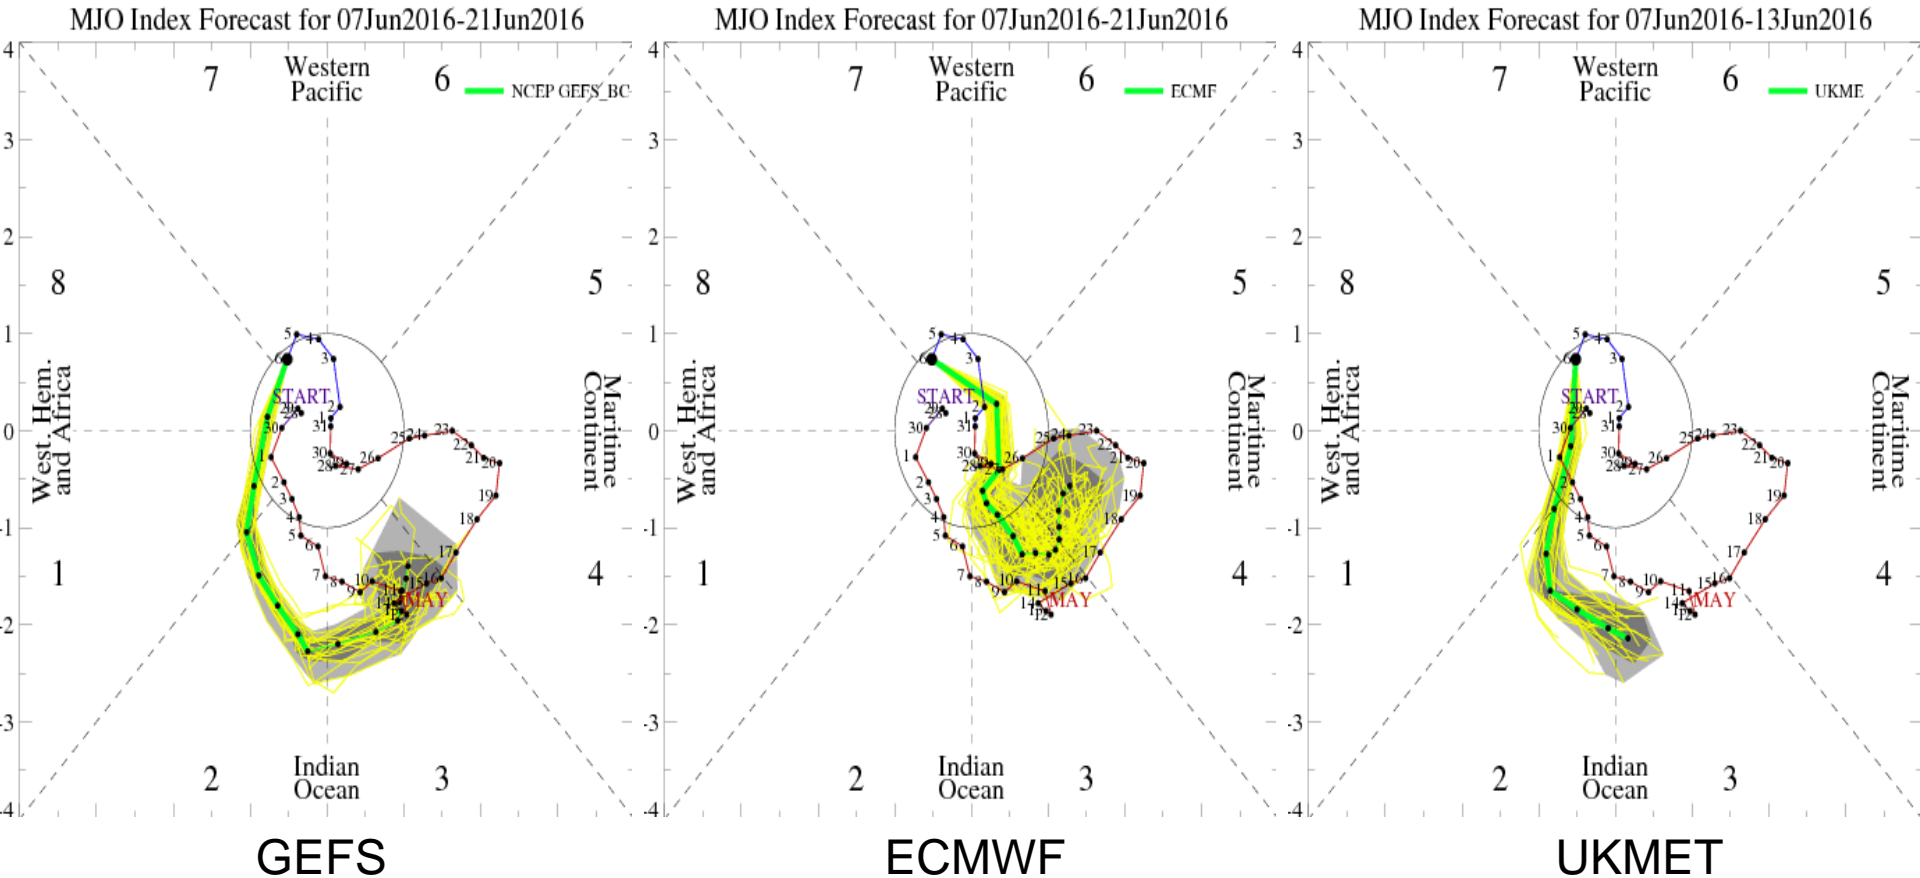

Upper-level divergence remains over eastern IO, most of Pacific/Africa.

06 JUN 2016

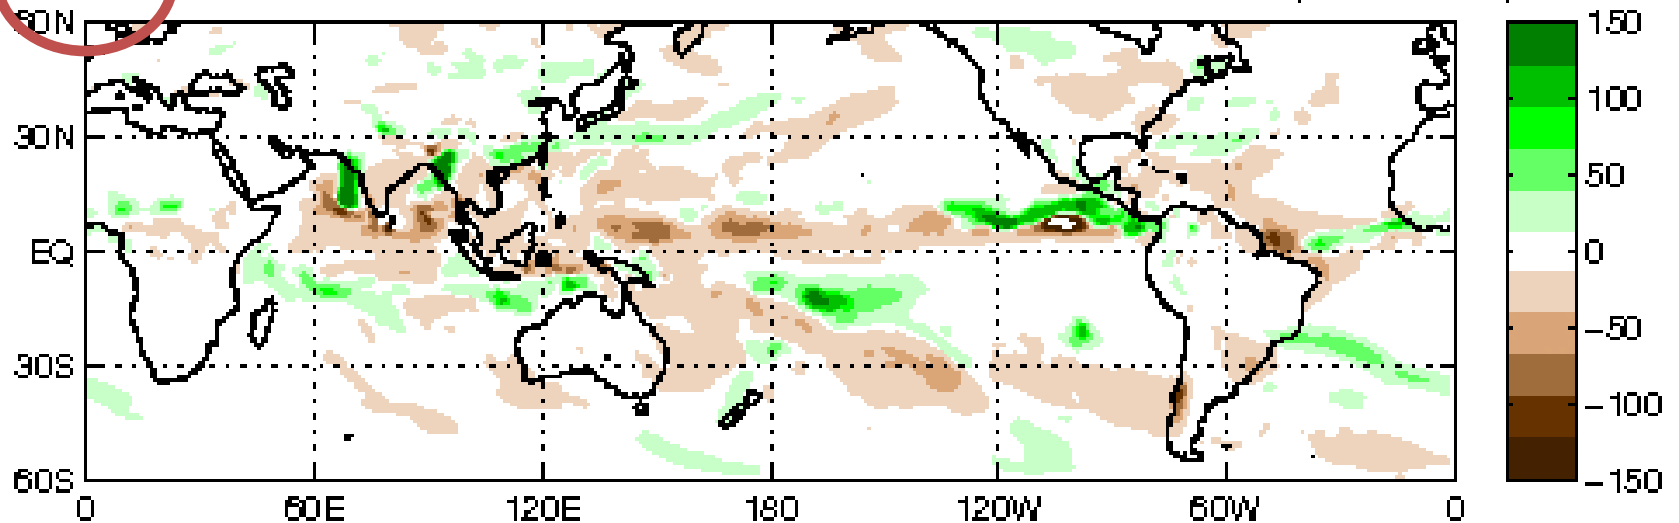

MJO Observation/Forecast

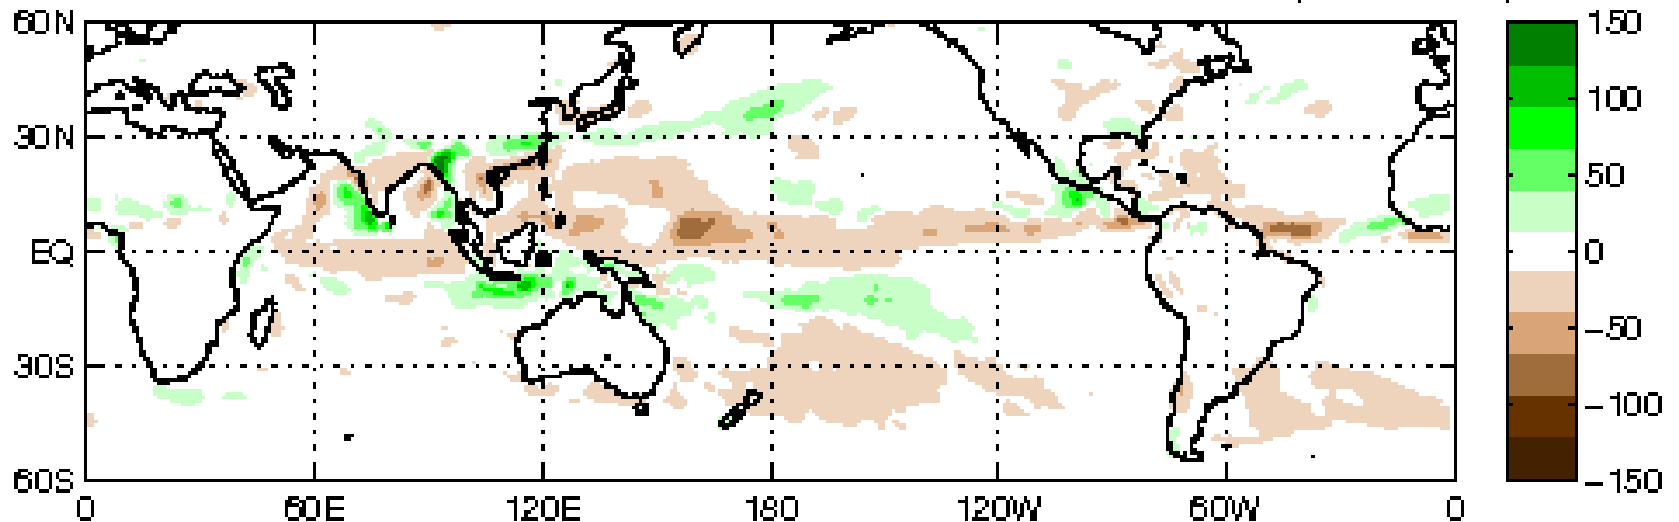

Wheeler-Hendon based analyses of model forecasts indicate a weak signal during week-1, with an expected increase in amplitude & rapid propagation of Intraseasonal signal into the Indian Ocean/Maritime Continent during Week-2.
