

Global Tropics Hazards And Benefits Outlook

11/20/2018

Adam Allgood

Outline

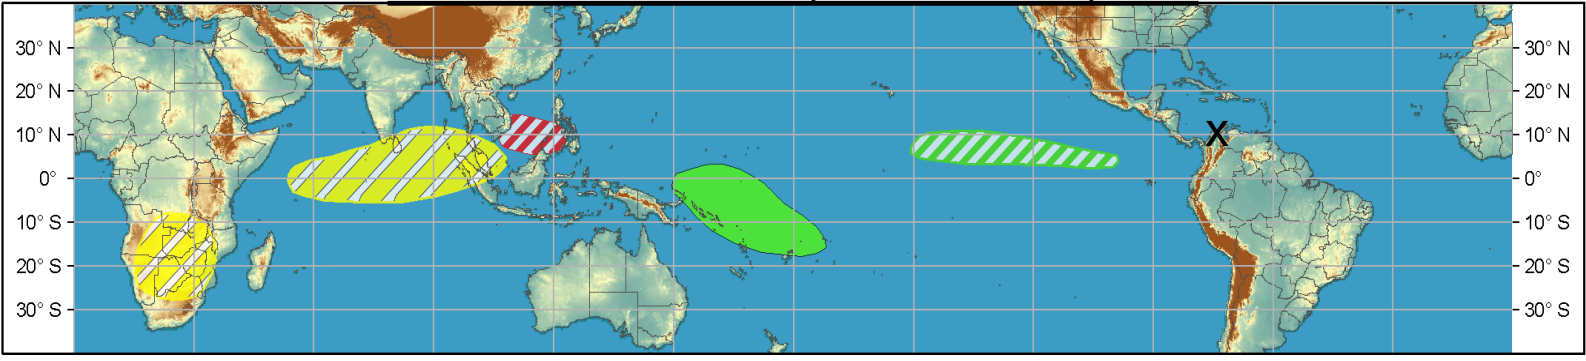

1. Review of Recent Conditions
2. Synopsis of Climate Modes
3. GTH Outlook and Forecast Discussion
4. Connections to U.S. Impacts

Outlook Review

Week 1 - Valid: Nov 14, 2018 - Nov 20, 2018

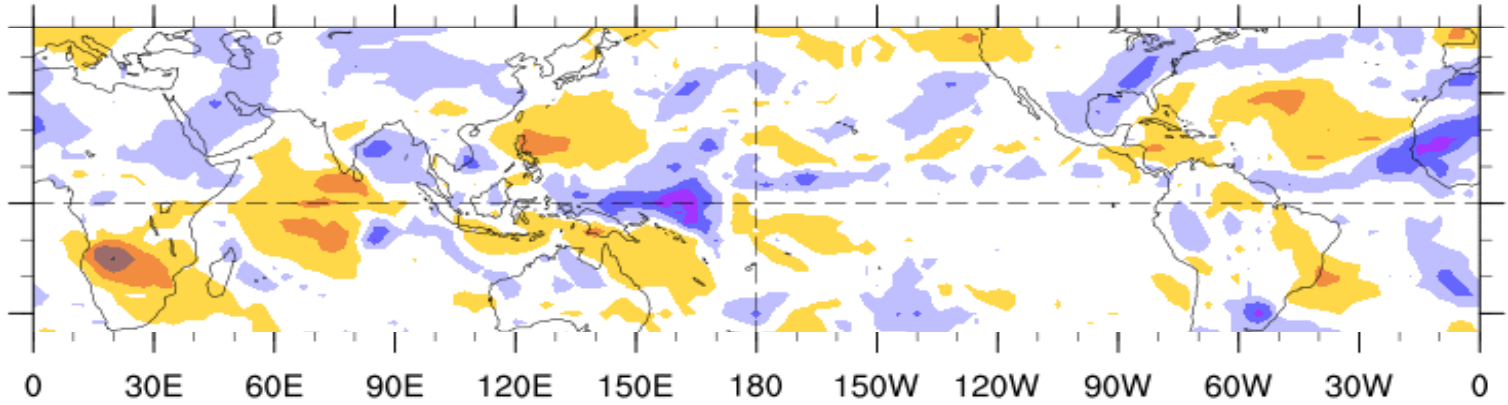

Week 2 - Valid: Nov 14, 2018 - Nov 20, 2018

7-Day Average OLR Anomaly

2018/11/12 - 2018/11/18

Synopsis of Climate Modes

ENSO: (8 November, 2018 Update)

- ENSO Alert System Status: [El Niño Watch](#)
- El Niño is expected to form and continue through the Northern Hemisphere winter 2018-19 (~80% chance) and into spring (55-60% chance).

MJO and other subseasonal tropical variability:

- The MJO remains active, with the enhanced phase currently over the Maritime Continent.
- Interactions between the MJO, a Rossby wave over the West Pacific, and the low frequency state have weakened and slowed the RMM index over the past week.
- Dynamical models indicate a re-strengthening of the signal over the West Pacific during Week-1, with eastward propagation to the Western Hemisphere during Week-2.

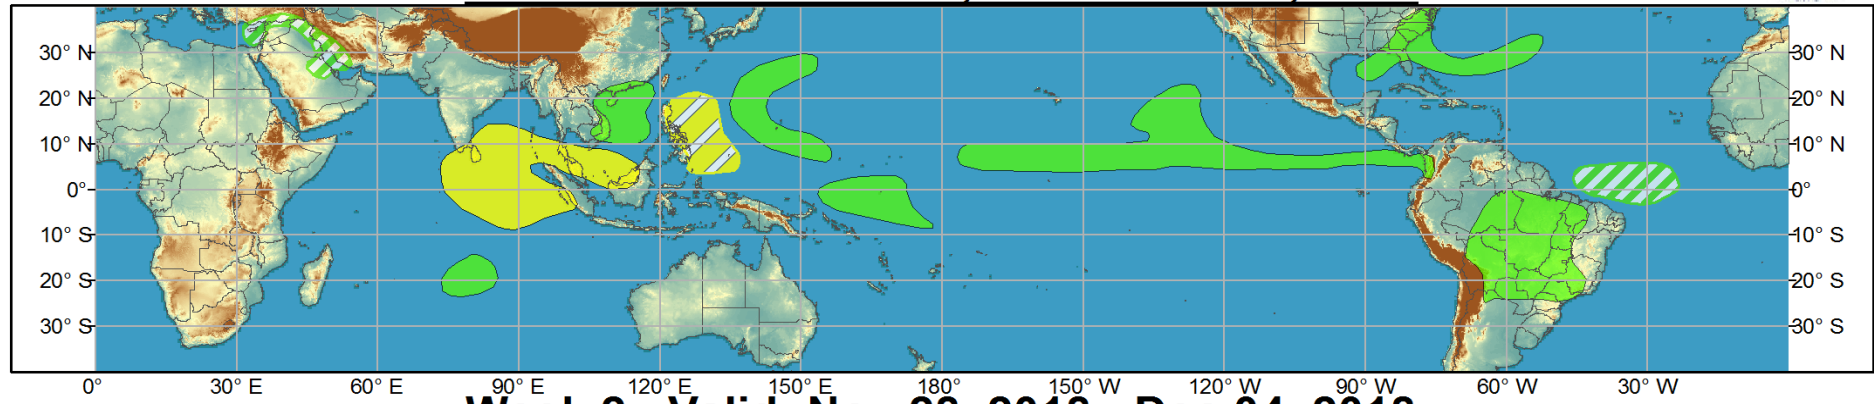

Extratropics:

- The MJO is likely to play a role in the evolution of the midlatitude pattern. Pacific MJO events are associated with a transition to a negative AO pattern and below-average temperatures over the eastern CONUS. This is consistent with the Week-2 guidance from CPC.

Global Tropics Hazards and Benefits Outlook - Climate Prediction Center

Week 1 - Valid: Nov 21, 2018 - Nov 27, 2018

Week 2 - Valid: Nov 28, 2018 - Dec 04, 2018

Produced: 11/20/2018
Forecaster: Allgood

Confidence		
High	Moderate	
		Tropical Cyclone Formation Development of a tropical cyclone (tropical depression - TD, or greater strength).
		Above-average rainfall Weekly total rainfall in the upper third of the historical range.
		Below-average rainfall Weekly total rainfall in the lower third of the historical range.
		Above-normal temperatures 7-day mean temperatures in the upper third of the historical range.
		Below-normal temperatures 7-day mean temperatures in the lower third of the historical range.

Product is updated once per week, except from 6/1 - 11/30 for the region from 120E to 0, 0 to 40N. The product targets broad scale conditions integrated over a 7-day period for US interests only. Consult your local responsible forecast agency.

IR Satellite & 200-hpa Velocity Potential Anomalies

Green: Enhanced Divergence

Brown: Enhanced Convergence

Robust MJO Wave-1 asymmetry, Indian Ocean event destructively interfering with the low frequency state.

The MJO overspreads the Maritime Continent, convection begins returning to the Pacific.

Other modes begin interfering with the signal.

MJO Observation/Forecast

[RMM1, RMM2] forecast for Nov-20-2018 to Dec-04-2018

MJO Index Forecast for 20Nov2018-04Dec2018

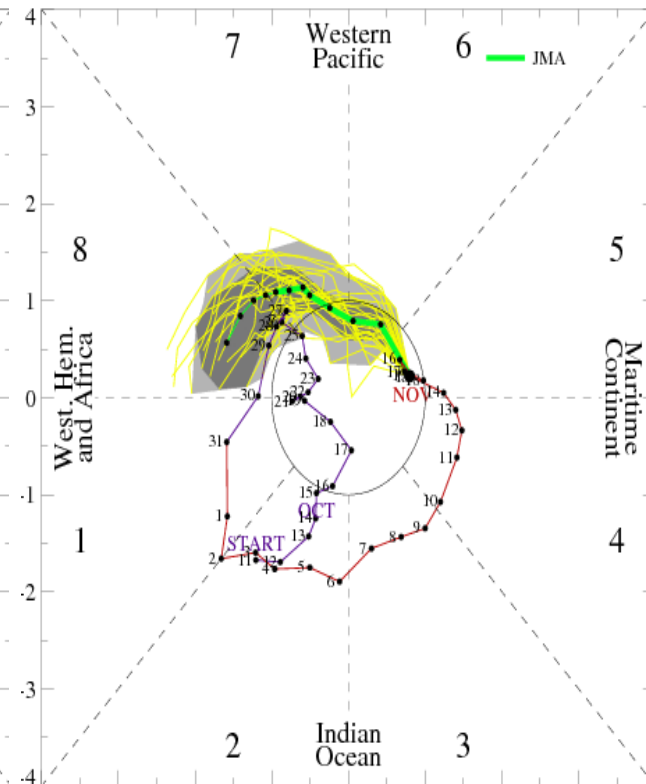

MJO Index Forecast for 20Nov2018-28Nov2018

GEFS

ECMWF

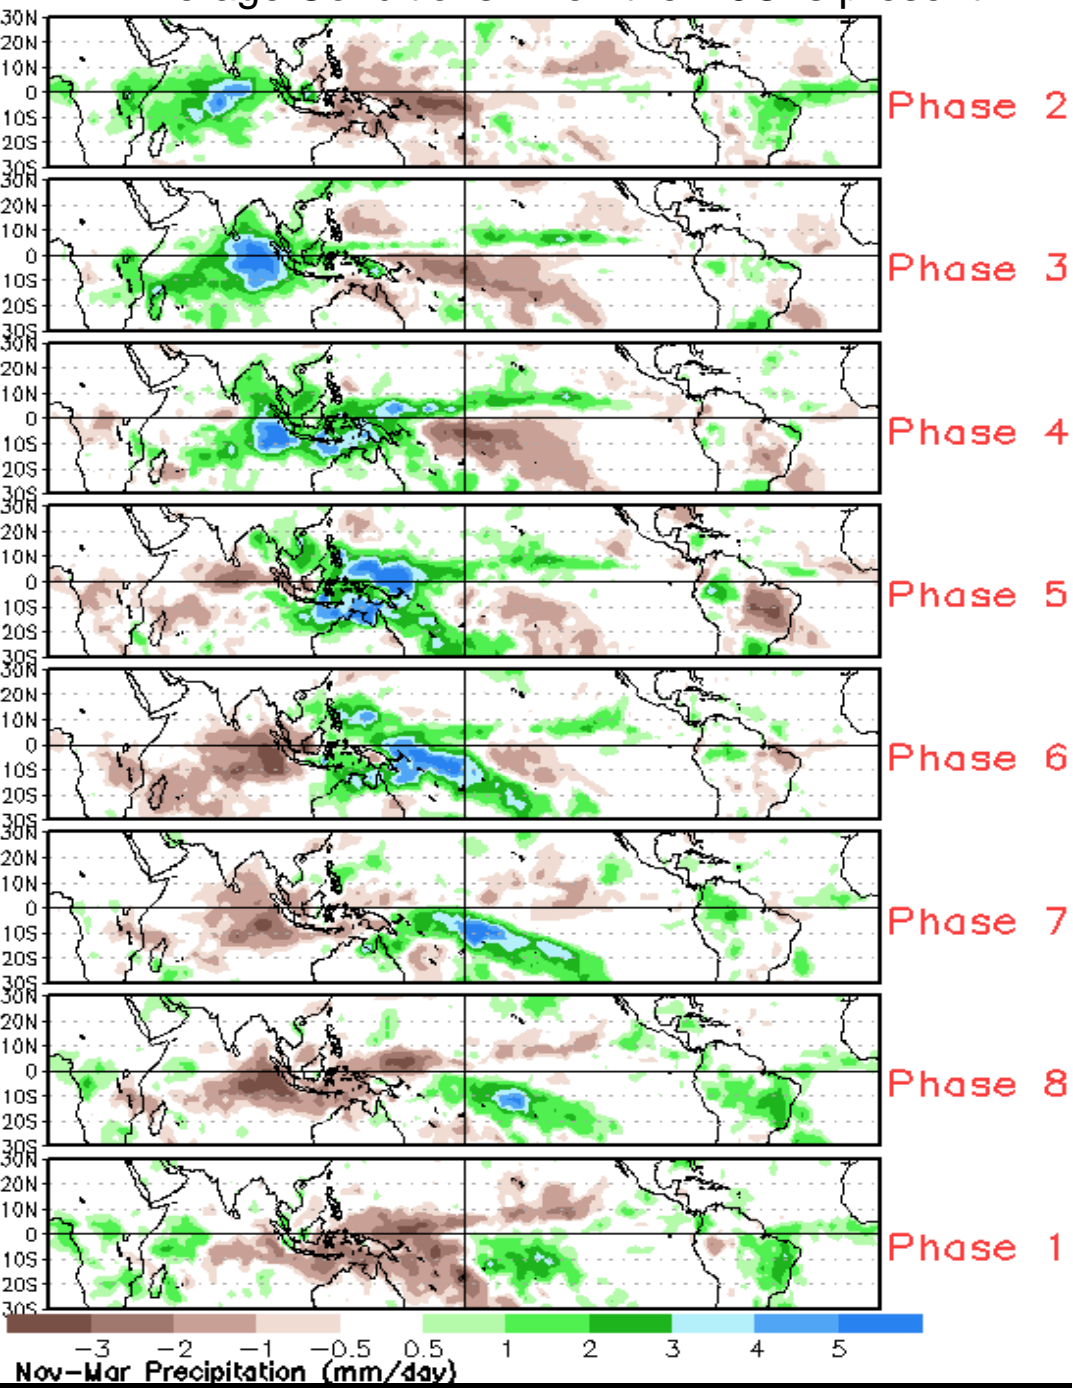

JMA

GEFS – robust MJO activity, moving from the Pacific (Week-1) to the Western Hemisphere (Week-2)

ECMWF – faster phase speed, enhanced signal reaches the Indian Ocean by the end of Week-2

JMA – Similar to GEFS/ECMWF, but a little later with the amplification

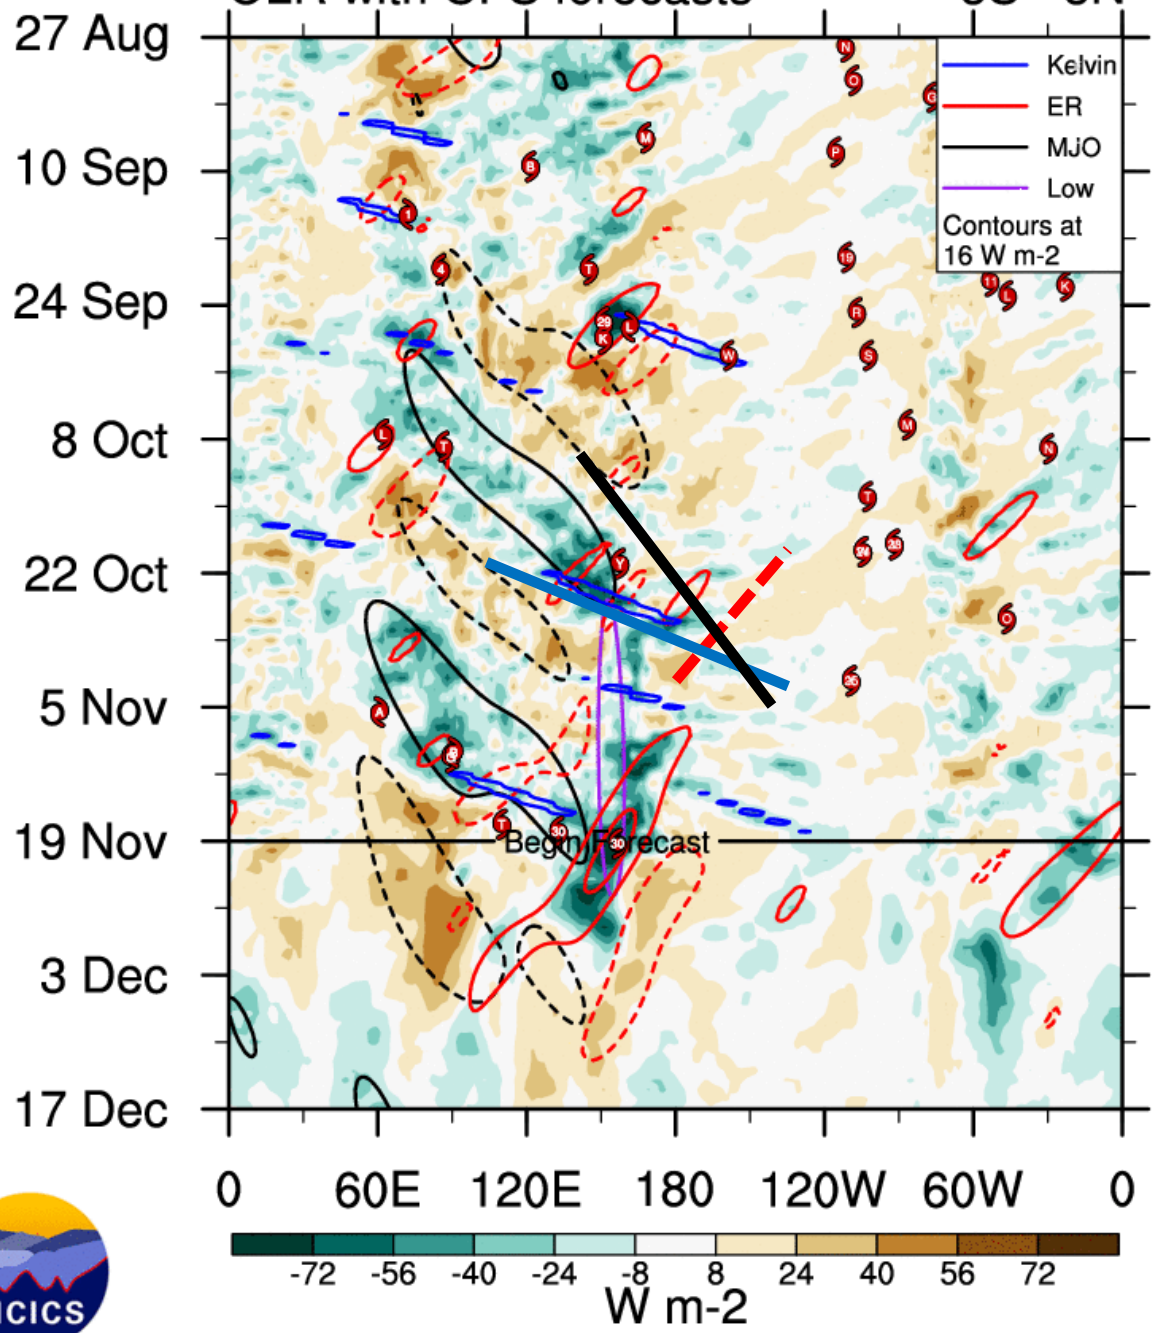

Average Conditions when the MJO is present

CAVEAT: These panels are representative of robust MJO events.

OLR with CFS forecasts

5S - 5N

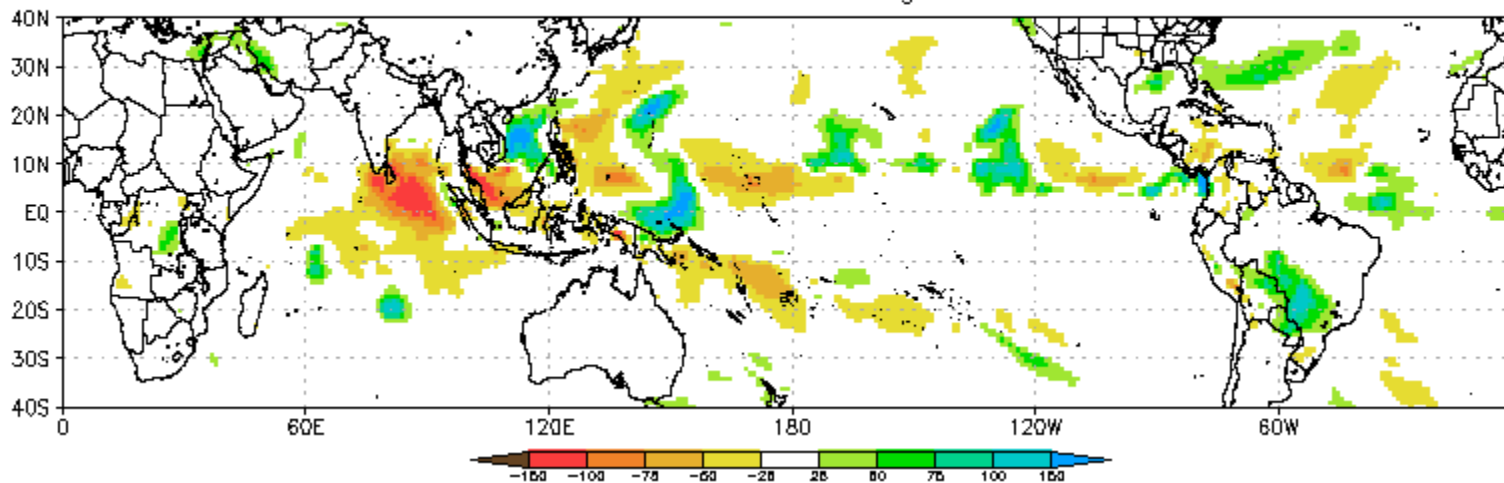

MJO envelope apparent,
Rossby wave activity
influencing the pattern

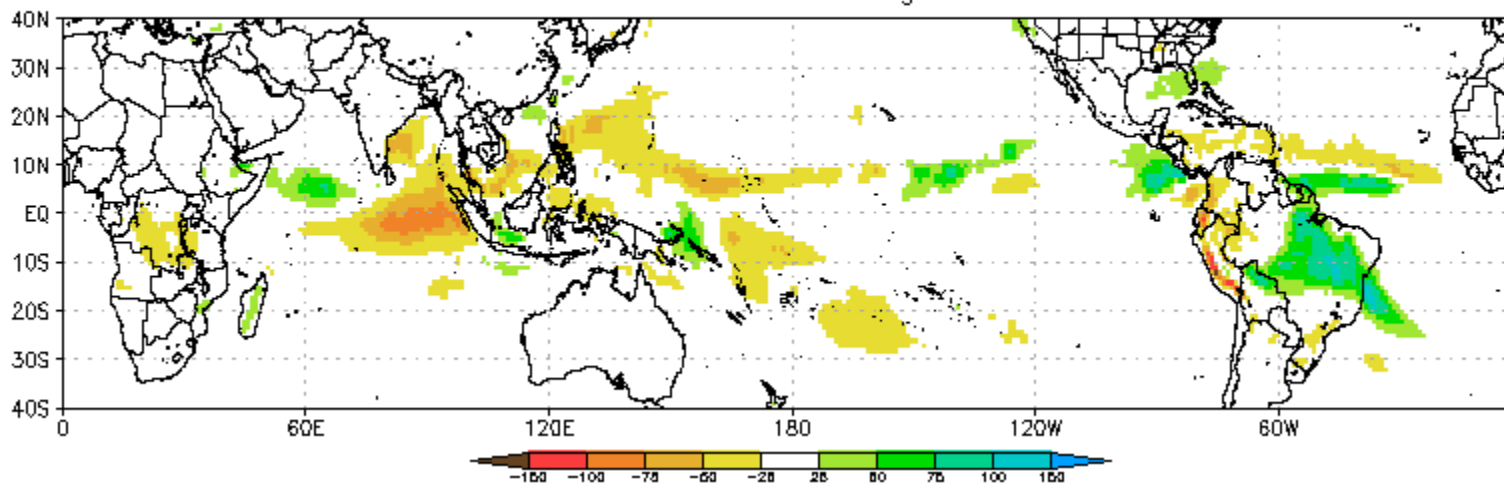

Low-frequency pattern
beginning to constructively
interfere with the MJO

CFS Precipitation Anomalies (mm) Issued 19Nov2018
Week-1 Forecast Ending 27Nov2018

CFS Precipitation Anomalies (mm) Issued 19Nov2018
Week-2 Forecast Ending 04Dec2018

November Tropical Storm Formation by MJO phase

Phase 1 (65 days) 21 storms

Phase 4 (77 days) 17 storms

Phase 7 (68 days) 11 storms

Phase 2 (88 days) 16 storms

Phase 5 (72 days) 20 storms

Phase 8 (60 days) 14 storms

Phase 3 (89 days) 8 storms

Phase 6 (91 days) 19 storms

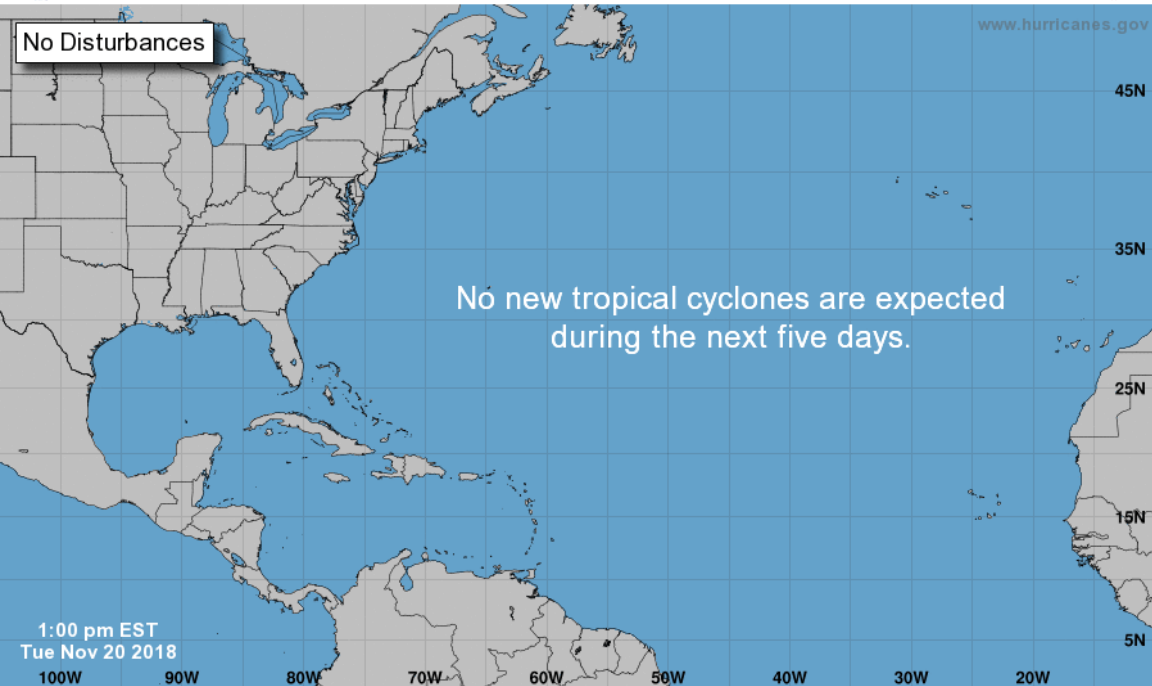

Null (380 days) 65 storms
